This is a script version of my Lord of the Rings Text Tutorial located here: [Lord of the Rings Text Effect](#)

Get the script for GIMP version 2.4 here: [LOTR Script-Fu 2.4](#)

Get the script for GIMP version 2.2 here: [LOTR Script-Fu 2.2](#)

Just add some text to your image, click on the script (Filters Menu > Alpha to Logo > Lord of the Rings...) and choose the settings you desire. My preview above was created by adding 3 separate text layers of various font sizes, merging them together and then running the script using the default settings. There are 3 different gradient blend styles to choose from: Dimpled, Angled, and Spherical. Dimpled looks the best to me so I've set it as the default. But, experiment to see what looks best to you.

It works well on any font, giving it a hard-chiseled edge, but obviously works best on the **Ringbearer font**, which you can download here ([Get the Ringbearer font here! Click Me!](#)) and elsewhere on the web.

Just click on the download link to open the script in your browser window and then save it (File Menu > Save) in your GIMP scripts folder (ie....C:\Program Files\GIMP-2.x\share\gimp\2.0\scripts)

Then, go to the main GIMP window (not the image window) and choose the Xtns Menu > Script-FU > Refresh Scripts.

Under GIMP 2.4, you can find the script under the Filters Menu > Alpha to Logo > Lord of the Rings... For GIMP 2.2, it's under the Script-Fu Menu > Alpha to Logo > Lord of the Rings...
