

## The JoinedUp Text Filter Dialog

Green Outlines: Options that affect text size

Red Outlines: Options that affect appearance

Blue Outlines: Options that affect spacing

Yellow Outlines: Options that affect rotation

Purple Outlines: Reverse text

Orange Outlines: Retain layers

If the 'Retain layer' option is set to Yes, it is then possible to make precise adjustments to each of the letters of the text (which then sit on their own layers).

I have not yet found a use for retaining paths – but you never know.

The 'Alternative letter' options can only be applied to my own custom fonts.
