

Hello my Friends, here is another nice tutorial that will keep you busy for a while. Don't be discourage by the way the tutorial look, is easy an fun. Sorry I could not upload the Tutorial Pdf for the reason that is larger than the limit Mb in GC, but I have provided the Seashells and the Pebble stones Png

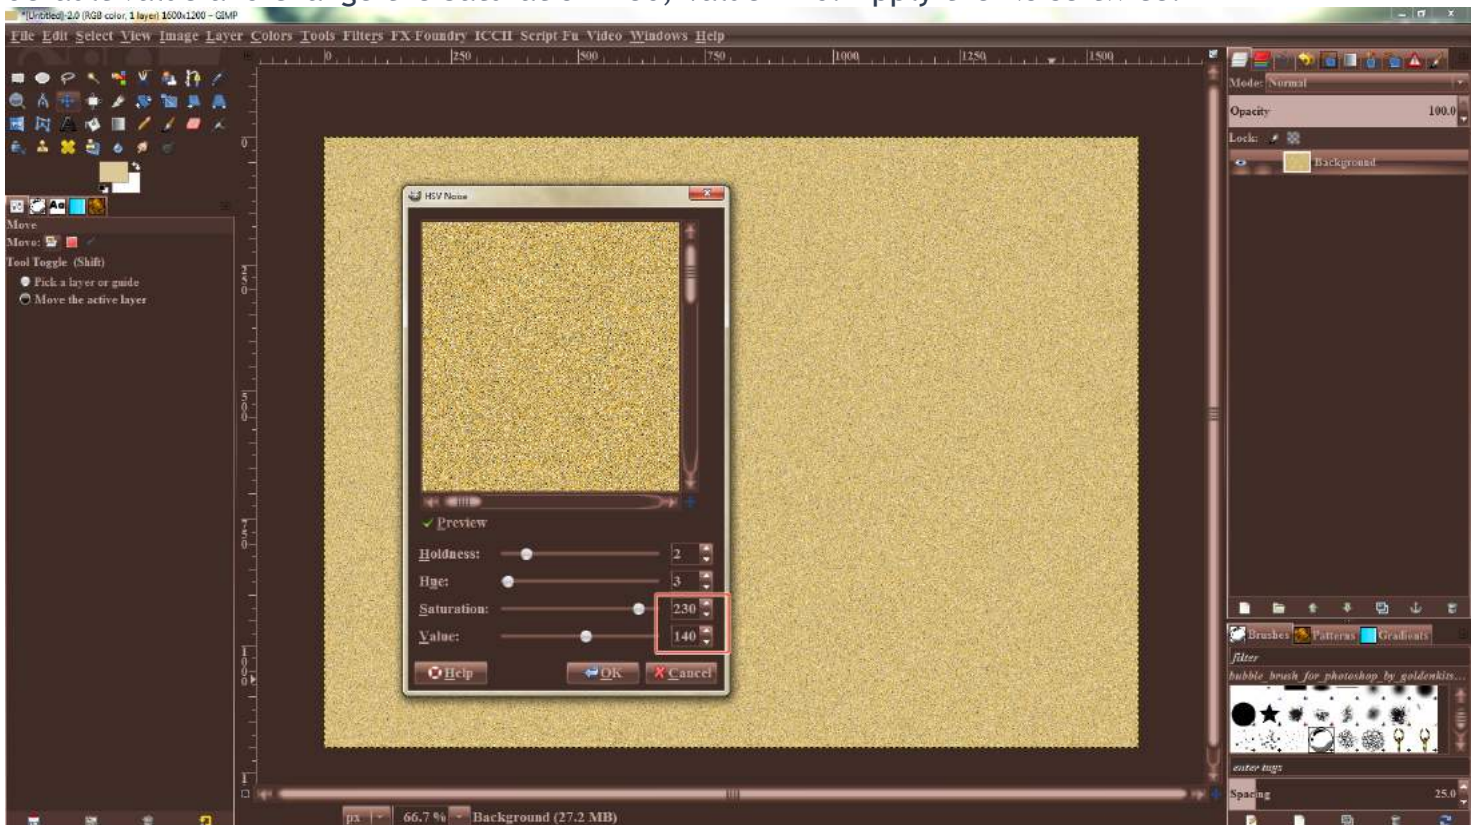

Final result

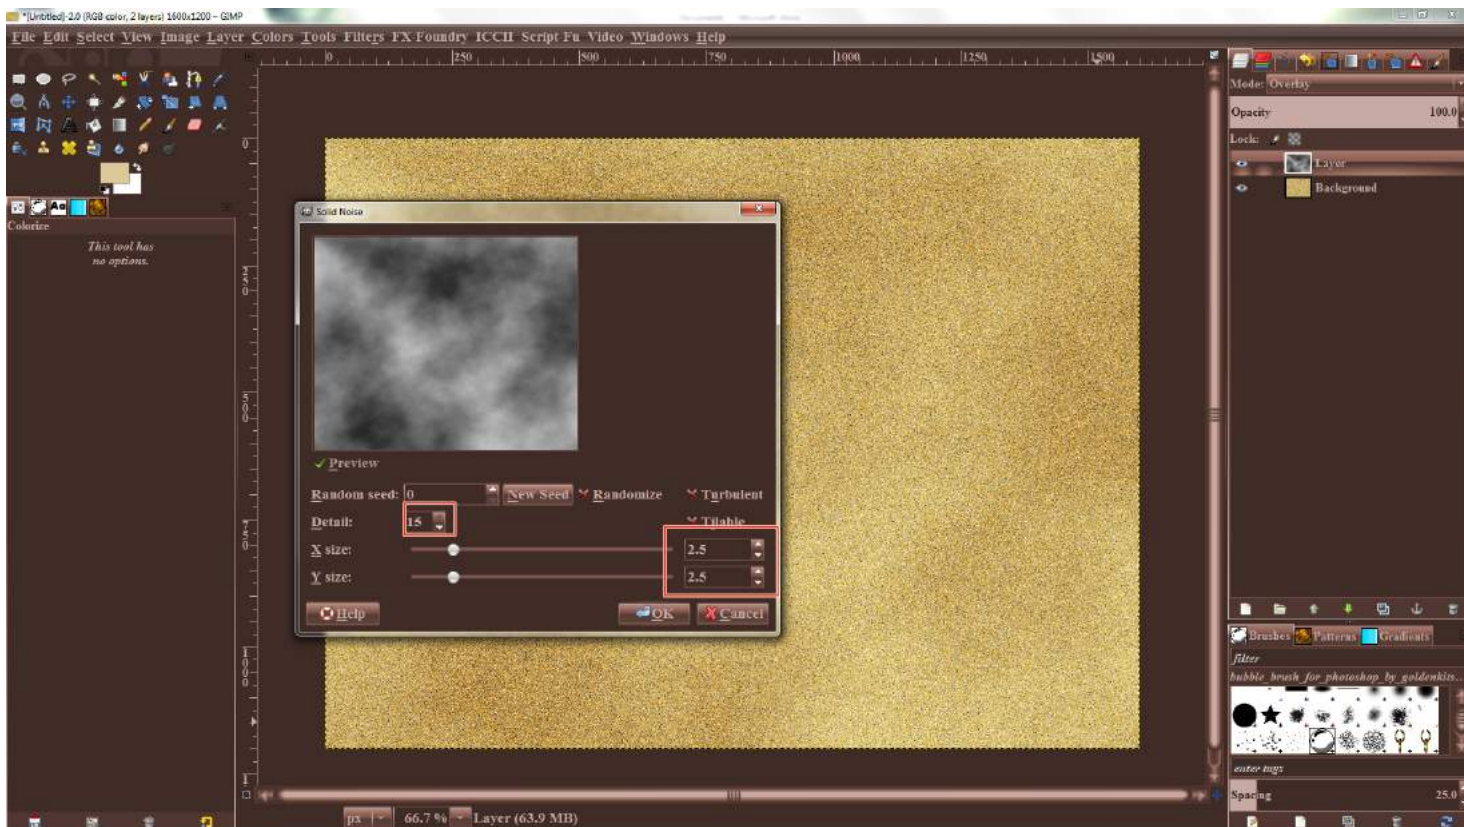

1. Let's start by opening a new document 1600 x 1200 px and fill it with dcc99a color.

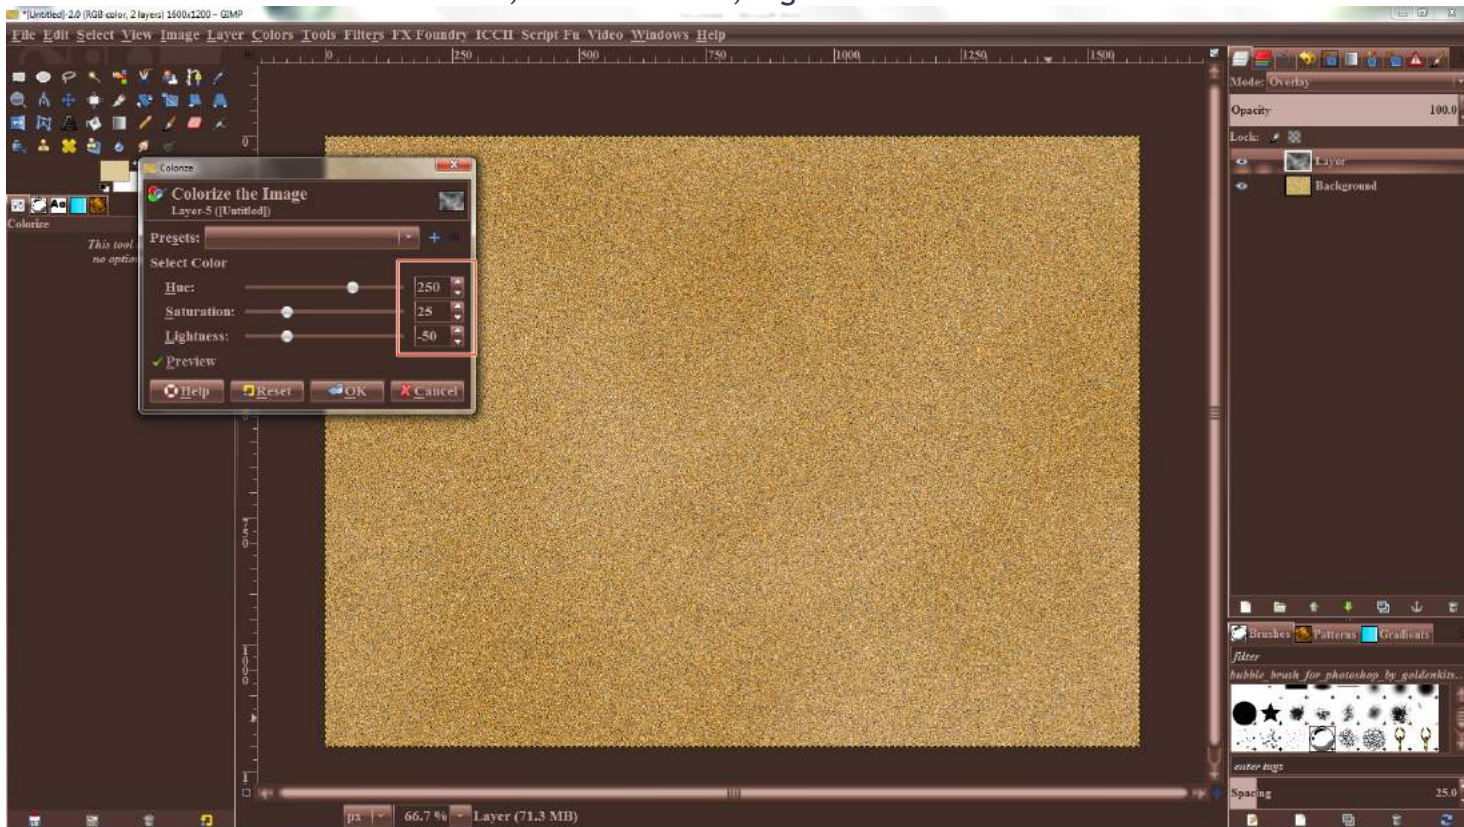

2. Go to Filters>Noise>HSV Noise and set the settings as follow: Leave the Holdness, Hue with the default value and change the Saturation>230, Value>140. Apply the Noise twice.

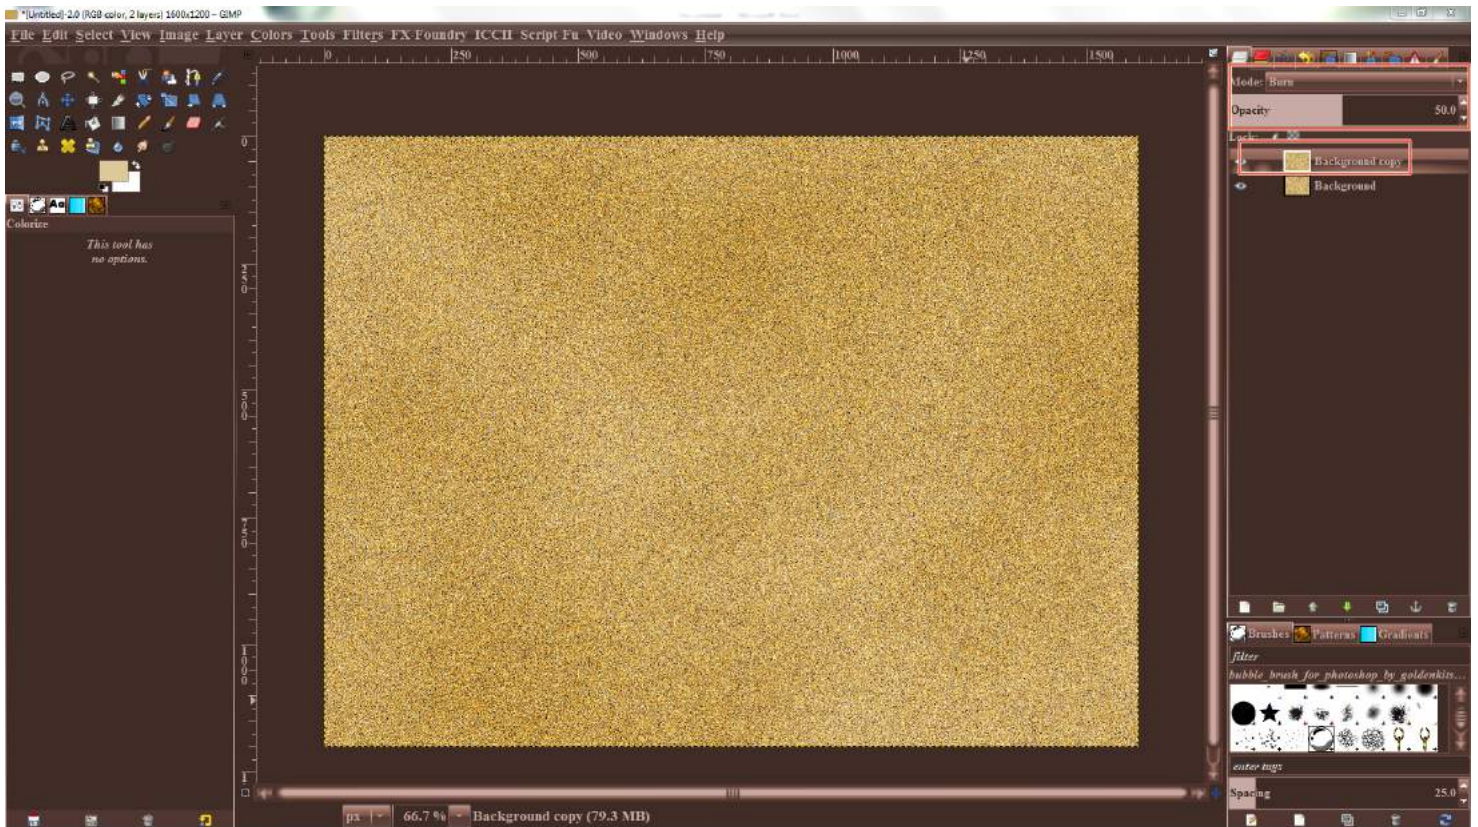

3. You can leave it like that if you're satisfied or make it a little more realistic. Create a New layer and change the layer's Mode to Overlay then go to Filters>Render>Solid Noise and apply settings.

4. Go to Colors>Colorize: Hue>250, Saturation>25, Lightness>50

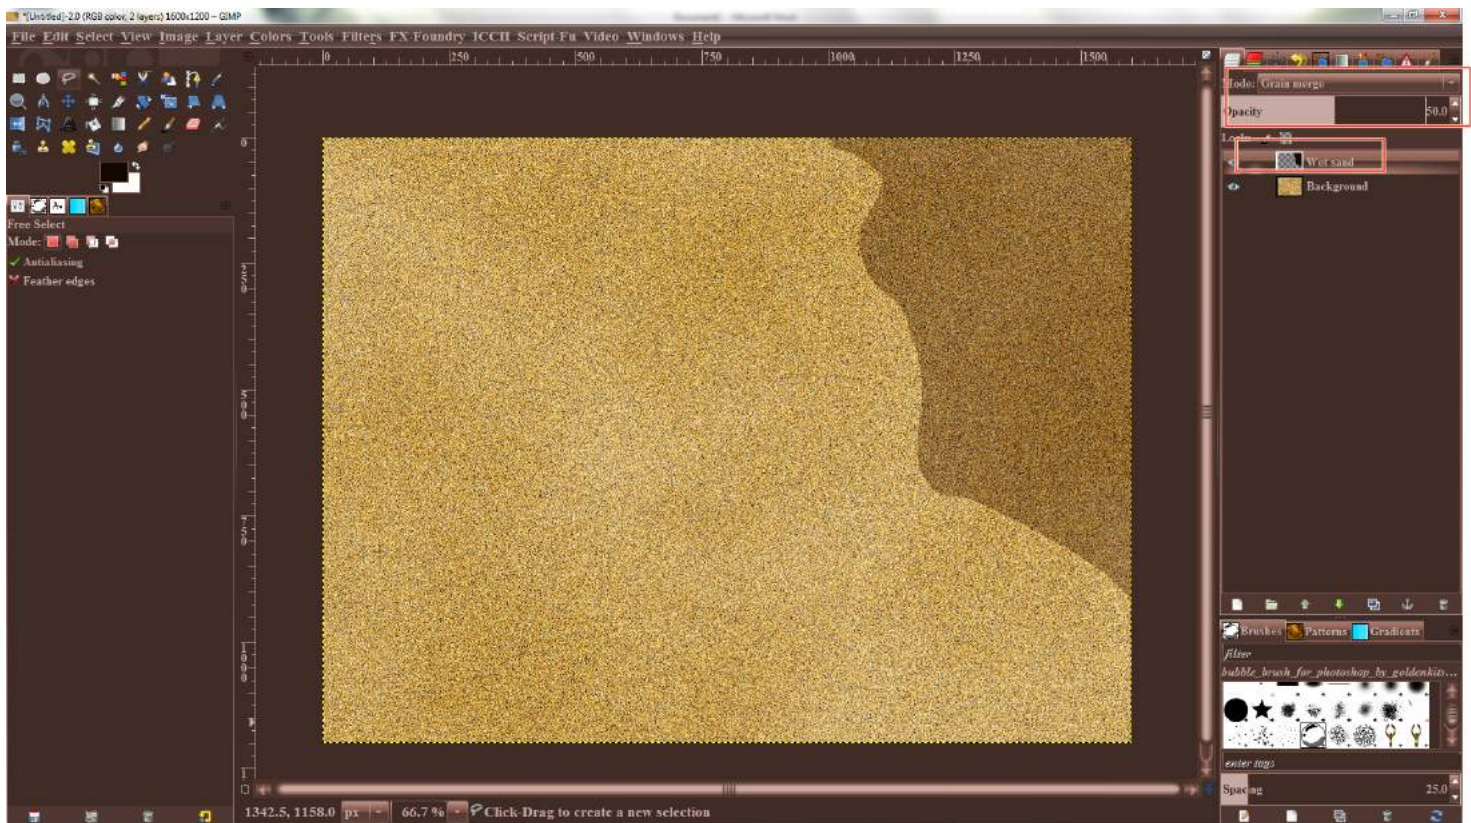

5. Duplicate the layer and change the Mode>Burn and Opacity>50. Merge down.

6. Create a New layer and name it Wet sand, then take the Free Select tool a a wavy shape on the top corner of the Image and fill it with black.

7. Change the layer's Mode to Grain Merge, Opacity>50

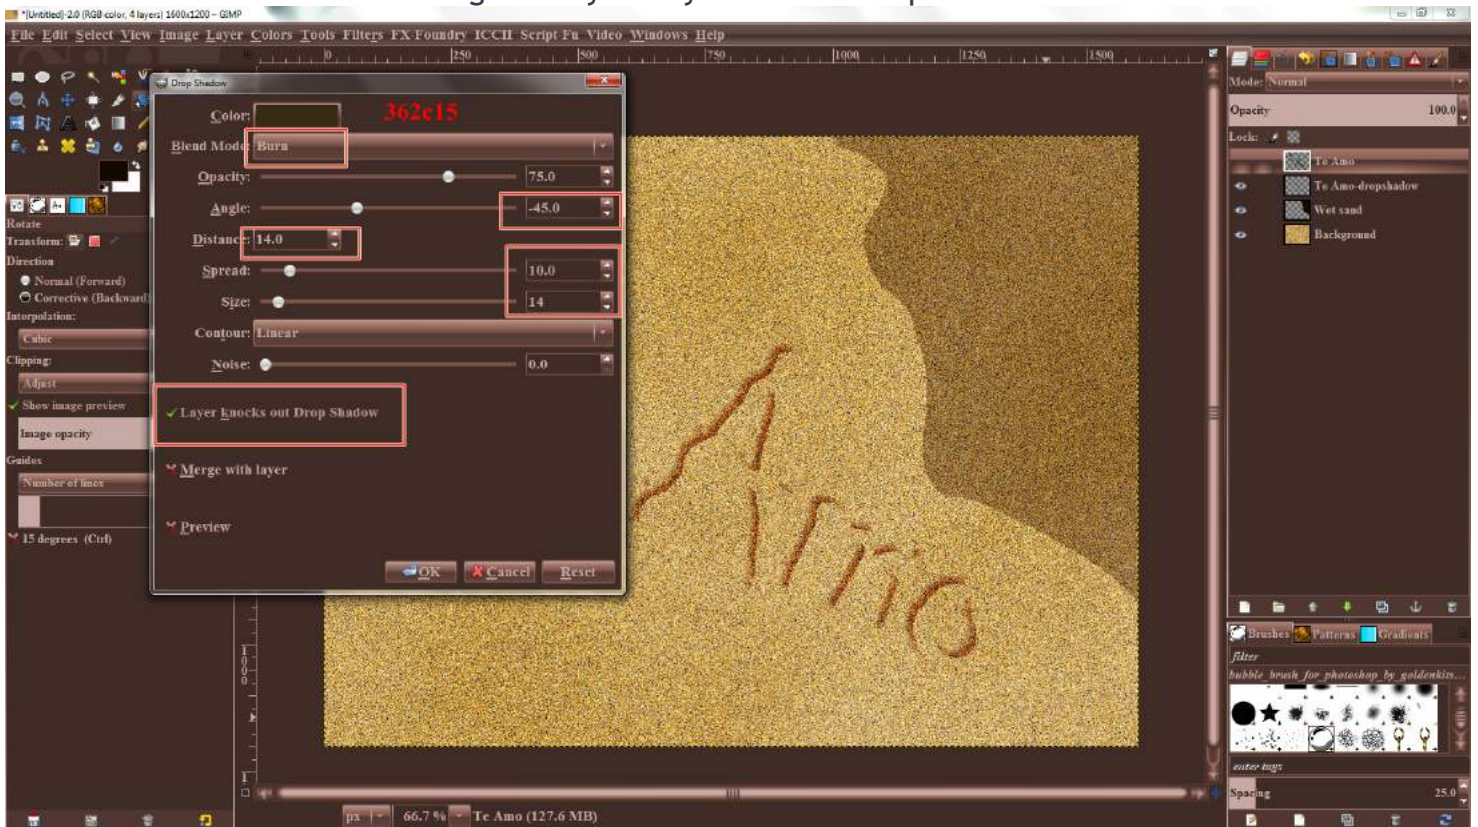

8. Let us create the Text. I'm using "Chiller Semi-Expanded" font with the size of >600px and you can use any color since we're going to make it Invisible.

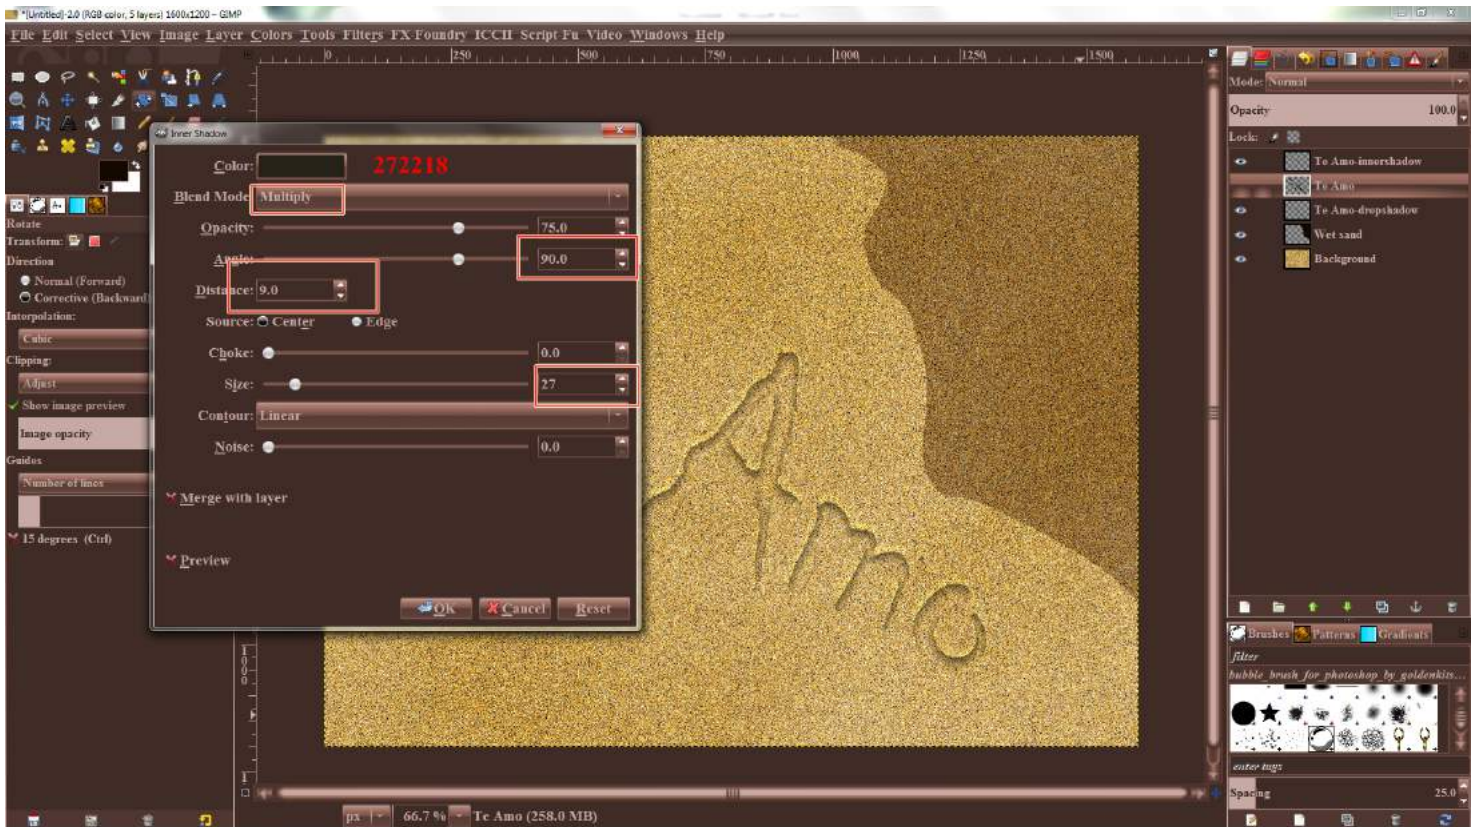

9. Take the Rotate tool and swing your Text a little diagonally.

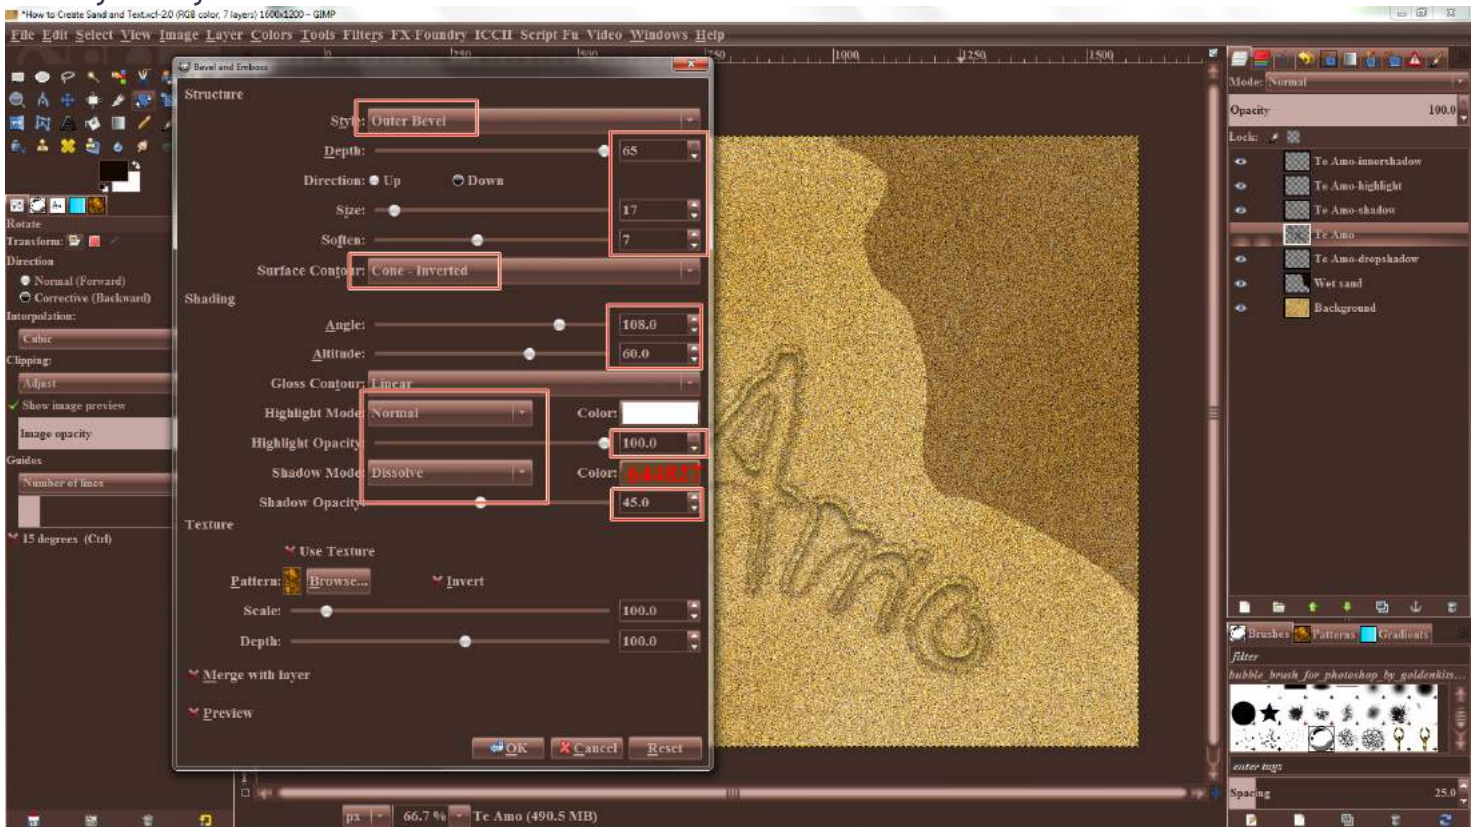

10. Make the Text Invisible and go to Layer>Layer Effects>Drop Shadow.

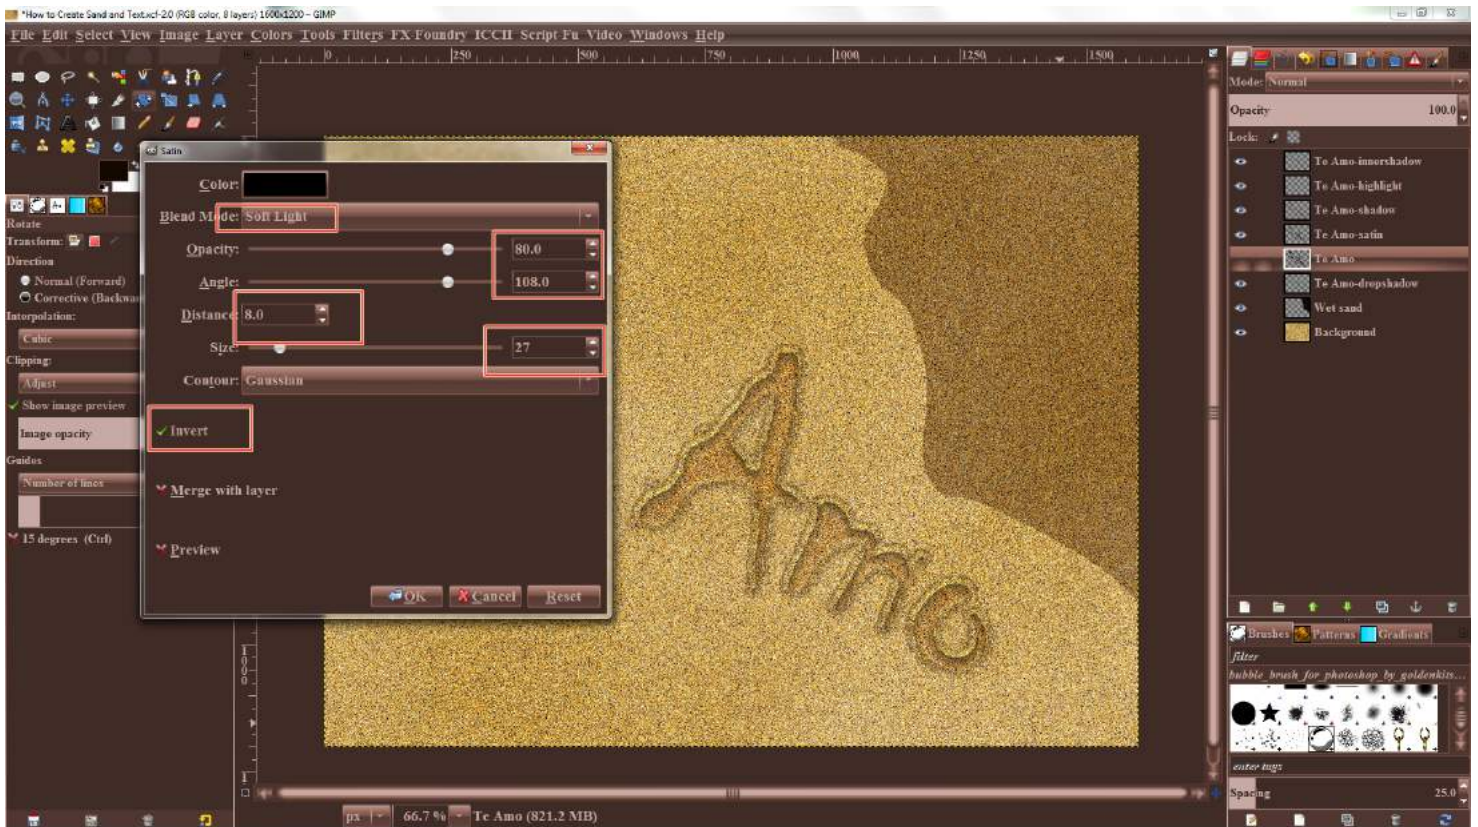

11. Layer>Layer Effects>Inner Shadow

12. Layer>Layer Effects>Bevel and Emboss

13. Layer>Layer Effects>Satin

14. Layer>Layer Effects>Outer Glow

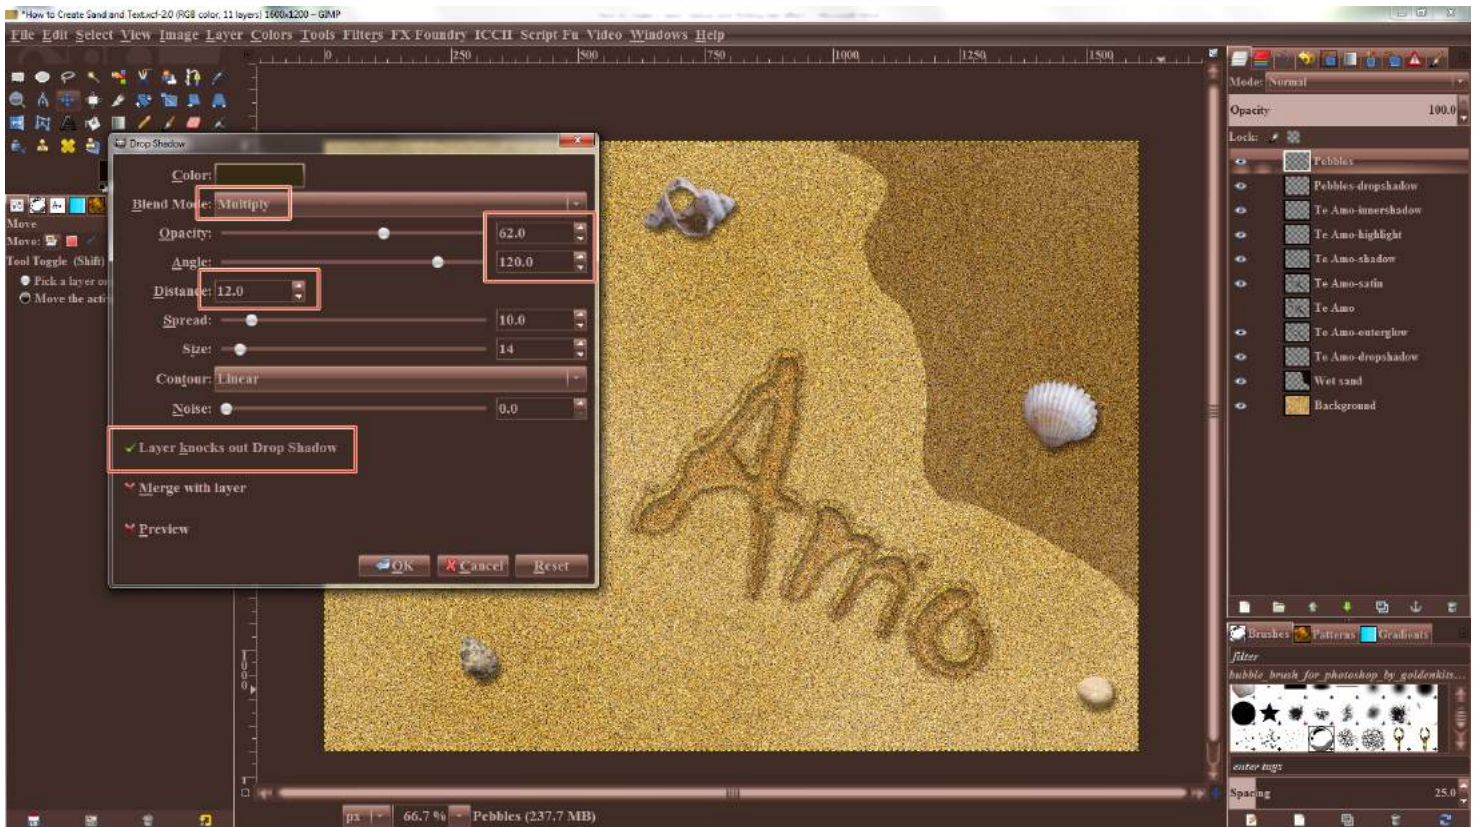

15. Create a New layer on top of all layers and name it “Pebbles”. Go to File>Open as layer the Pebbles images and place them wherever you want and merge each layer down to make one layer.

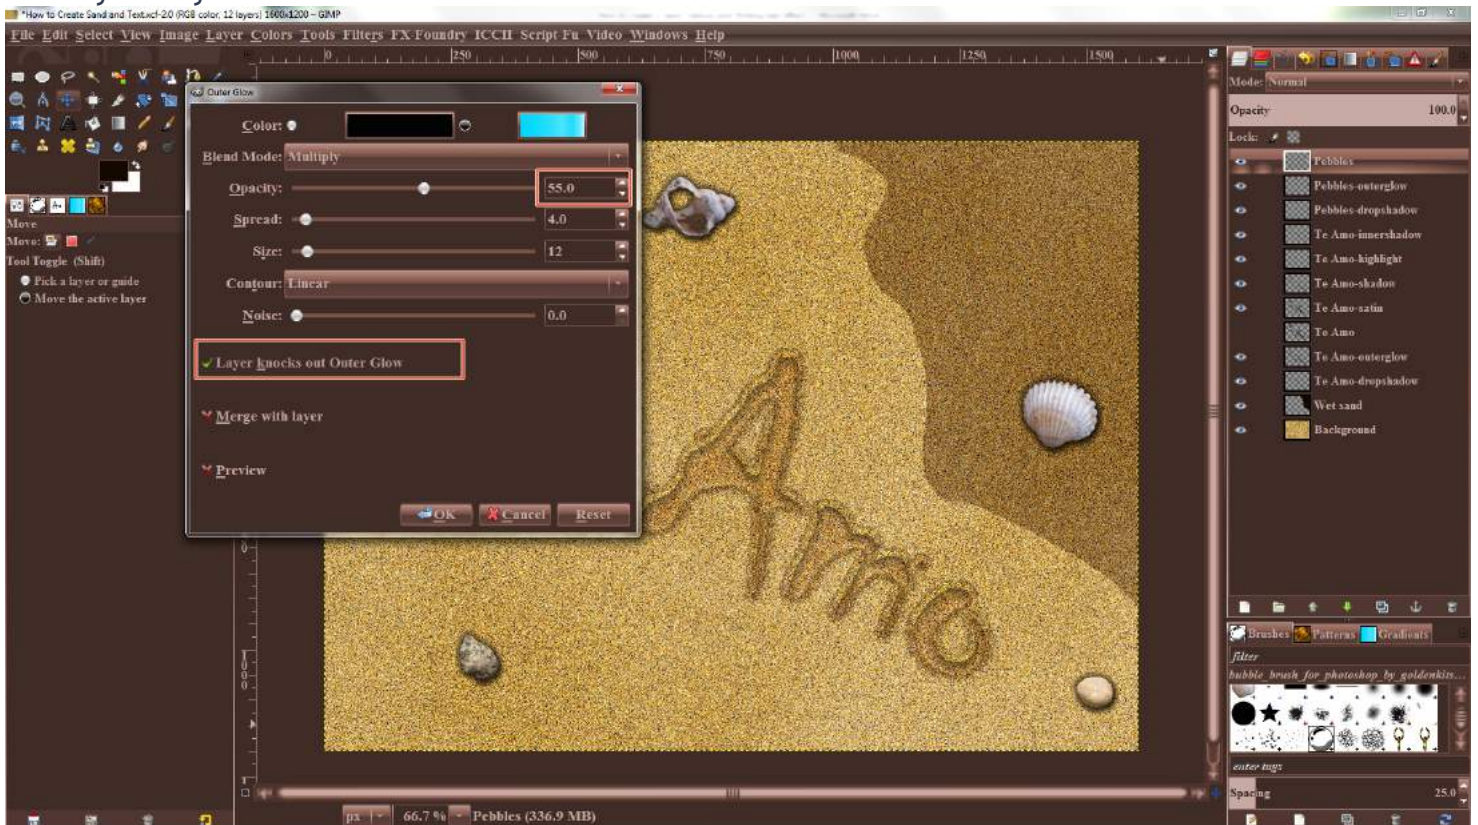

16. Create another New layer on top of Pebbles and name it “Seashell”. Open as Layers the Seashell images and Place them whenever you want and merge each layer down to make one layer.

17. Combined or Merge down the Seashell and the Pebbles layer into one, then go to Layer>Layer Effects>Drop shadow and change the setting a little then apply.

18. Layer>Layer Effects>Outer Glow

19. Now select the Outer Glow layer and apply Layer>Layer Effects>Bevel and Embos, same

settings as before. Thank you for following this tutorial. Adios...
