

Silhouette Text

Open a layer 640 x 300 in White. Typography : DeVinneOrn. Size 130

Lettering space 0; colour (at your election) I chose 18c2f4.

Write your text, make the text centred and layer to image size.

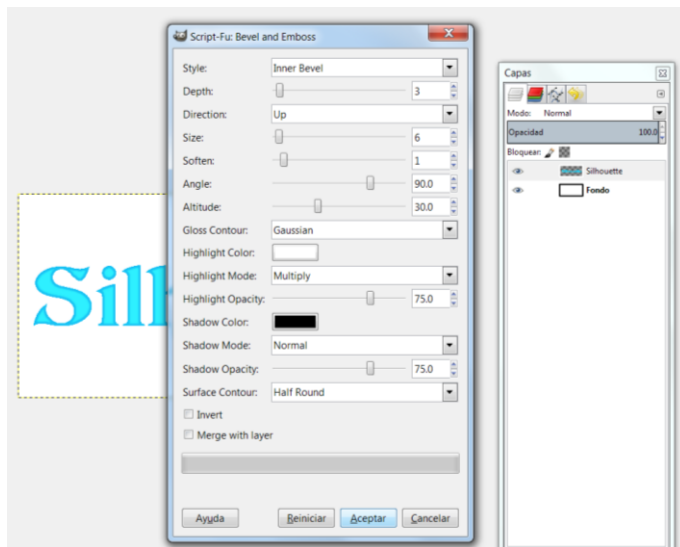

Alpha to selection – Select – shrink 3px – Create a new layer named white and fill the selection with white colour. Select nothing.

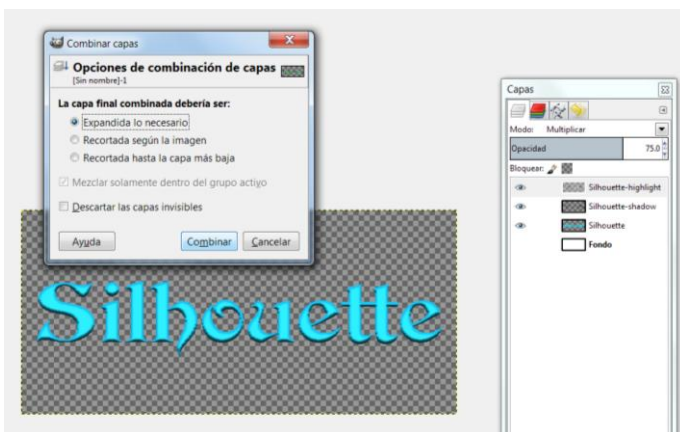

Highlight white layer, go to filters – blur – Gaussian Blur and set X & Y at 2px. Then, change the mode layer to Overlay.

Combine layer white with Silhouette.

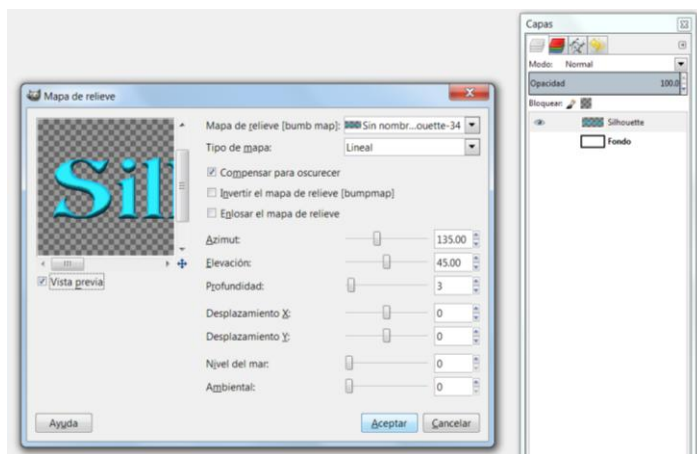

Highlight the layer Silhouette - go to Script-Fu – Layer Effects – Bevel & Emboss. Apply the settings:

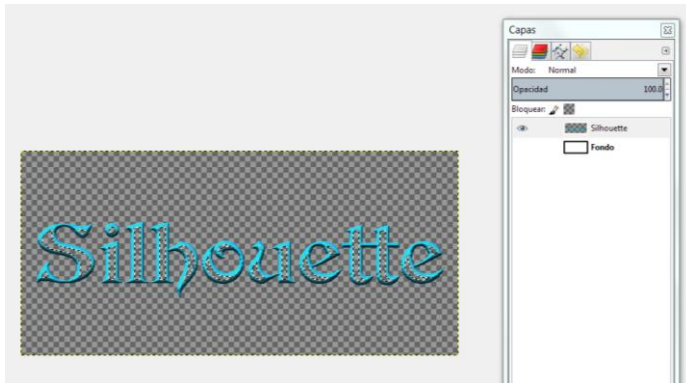

Close the eye to background layer and combine visible layers.

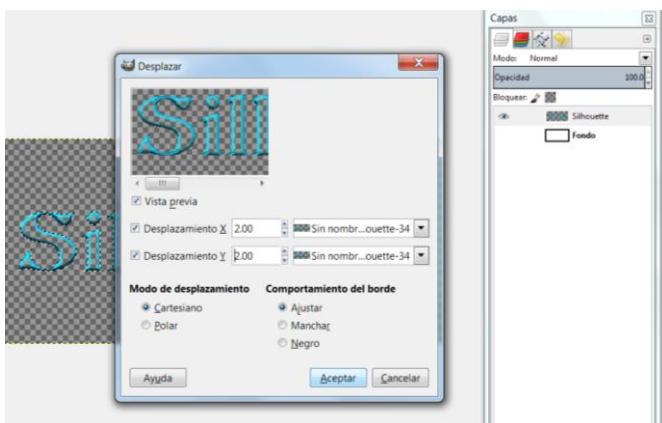

Highlight the layer, go to filters –Map - Bump Map; accept the settings default.

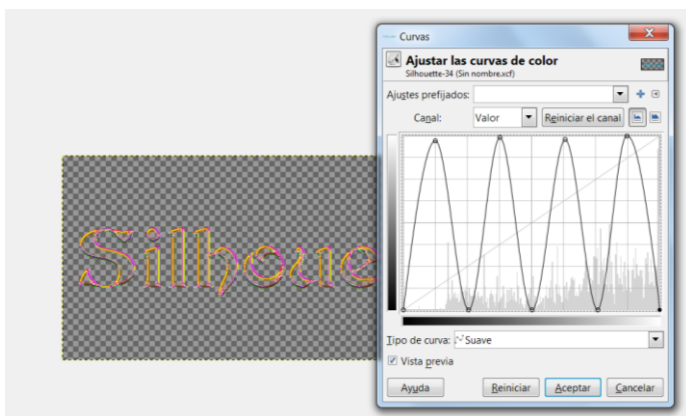

Highlight Silhouette layer – alpha to selection – Select – Shrink at 5px. continue with the selection held and go back to Select – Feather and set it at 5px too. Then press delete key twice. Select nothing.

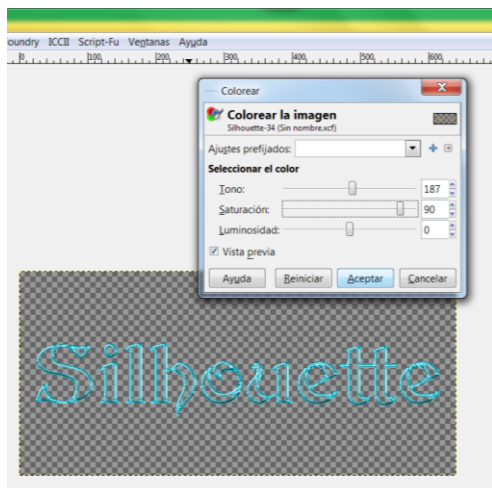

Highlight Silhouette layer - go to filters – Map – displace and set X & Y at 2 px. Accept.

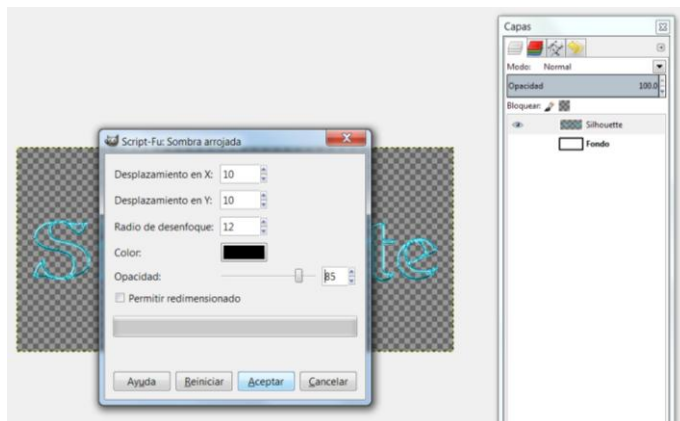

Go to Colours – Curves – and apply the values on the chart.

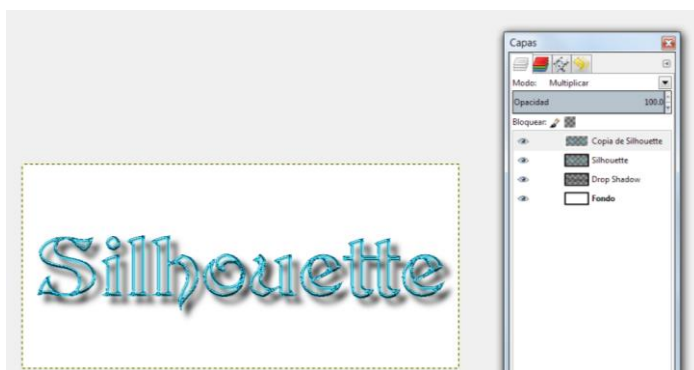

Go to colours – colourer – choose your preferred colour. Accept.

Go to filters – lights and shadows – drop shadow and apply 10px ; radius 12 and opacity 85%.

Duplicate Silhouette layer and put the upper layer in Multiply Mode. Or Dodge (try your best option)

On background layer you can fill it with a gradient, pattern or plain colour.

But you can save it in PNG to keep the transparency. Combine the layers.

I hope you like it.
