

NOT DAVE HILL'S EFFECT

Step 1

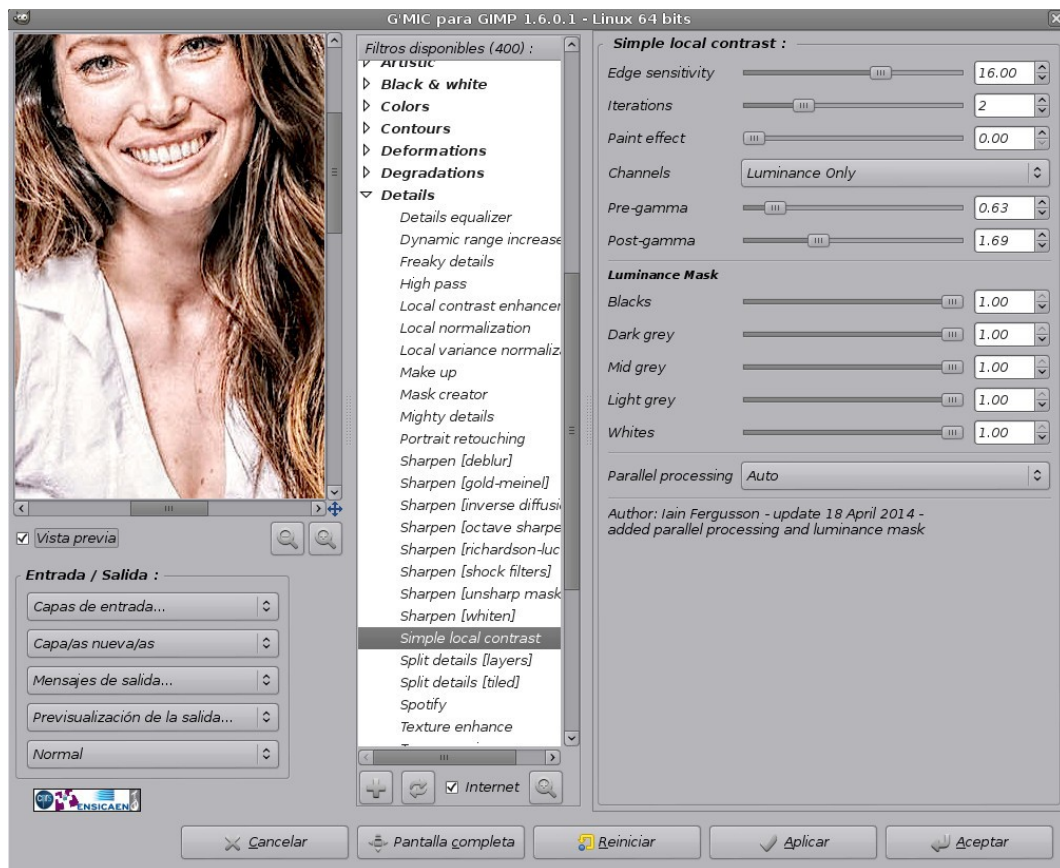

Open the image in Gimp.

Select in Filters the G'mic suite. (I'm working with 1.6.0.1 release)

In Output mode set New(s) layer.

Step 2

G'mic → Details → Simple Local Contrast and set the values as follow:

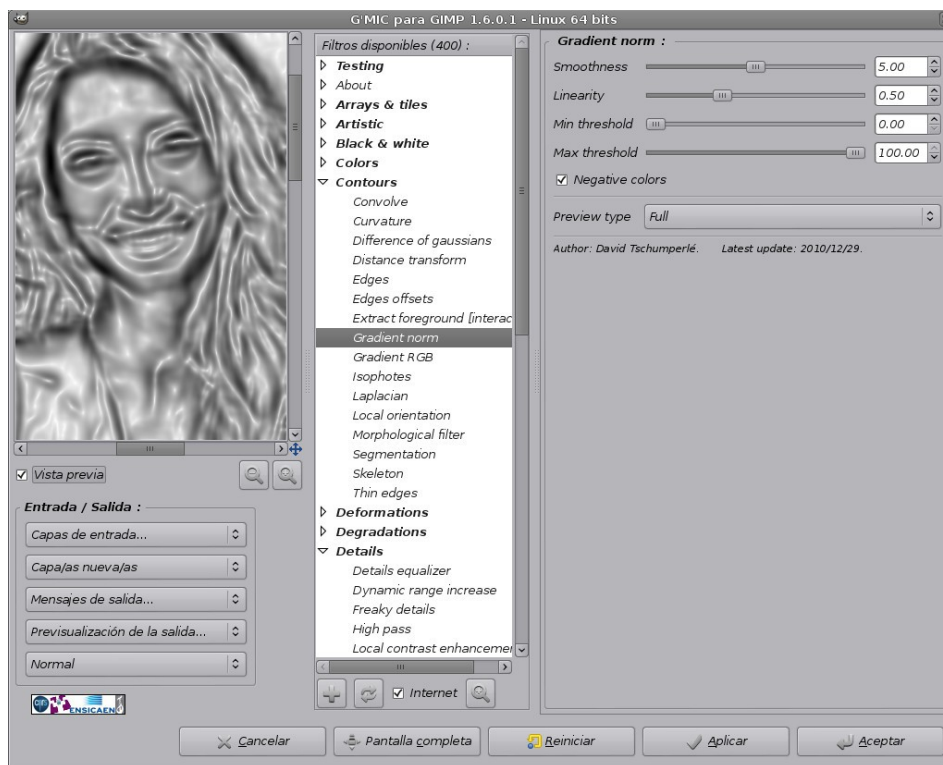

Step 3

Now select this Simple Local Contrast layer and apply:

G'mic → Contours → Gradient norm and set as you can see in the following screencap:

NOT DAVE HILL'S EFFECT

When filter finished working set this Gradient norm layer in Soft light mode and Opacity between 50 – 70 %. In this pic, set in 60 %.
You must see something like this:

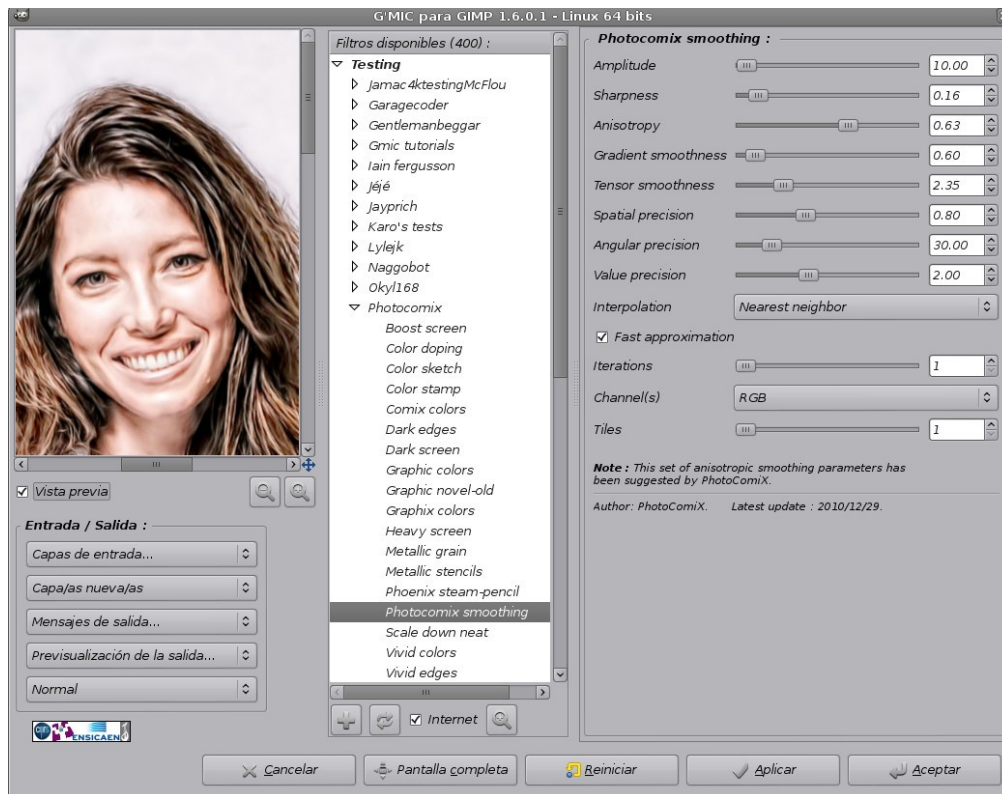

NOT DAVE HILL'S EFFECT

Step 4

Now make New from visible, and apply to this new layer:

G'mic → Testing → PhotoComix → Photocomix smoothing and set:

Set the opacity in Photocomix smoothing layer around 70 %. (See page 1)

NOT DAVE HILL'S EFFECT
