Short Text Tutorial (special for 2-ton)

1 Open a canvas 1600 x 600 in black.

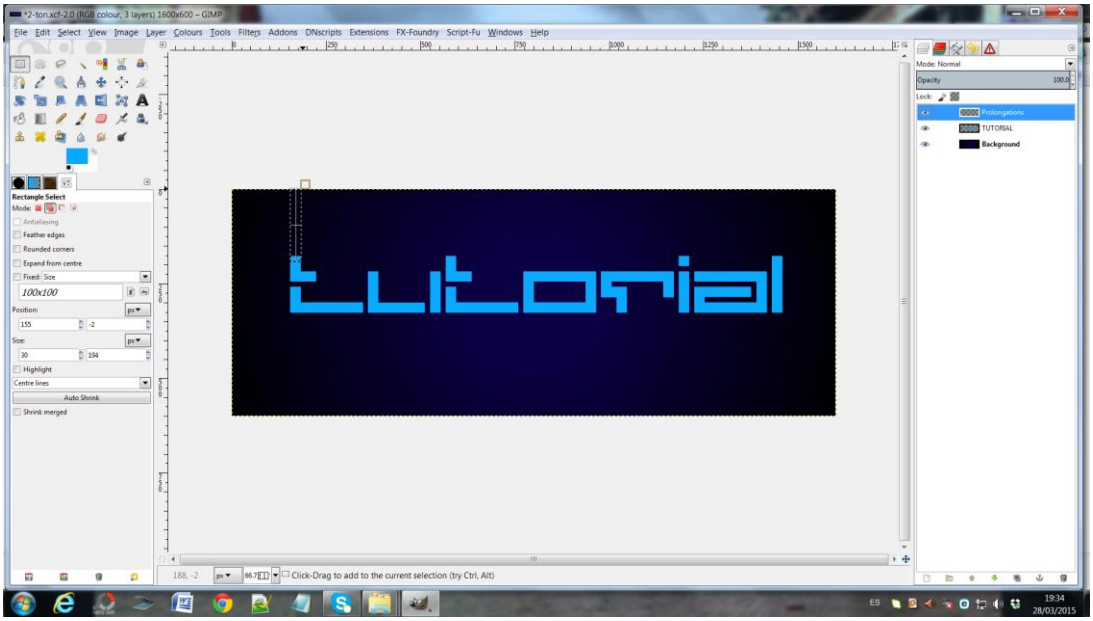

2 Put a dark colour you like as foreground and make sure you choose from foreground to transparent and apply the gradient in radial form since the centre.

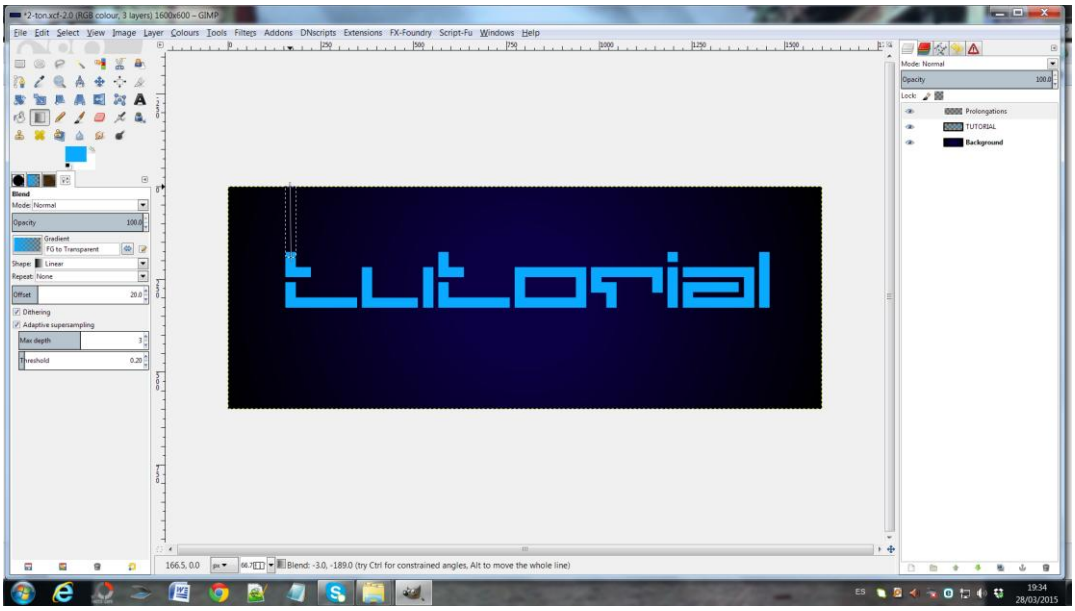

3 Select a colour you like for your text.

4 Choose typography “depthcore”, Write your text in size about 275px. Center the text.

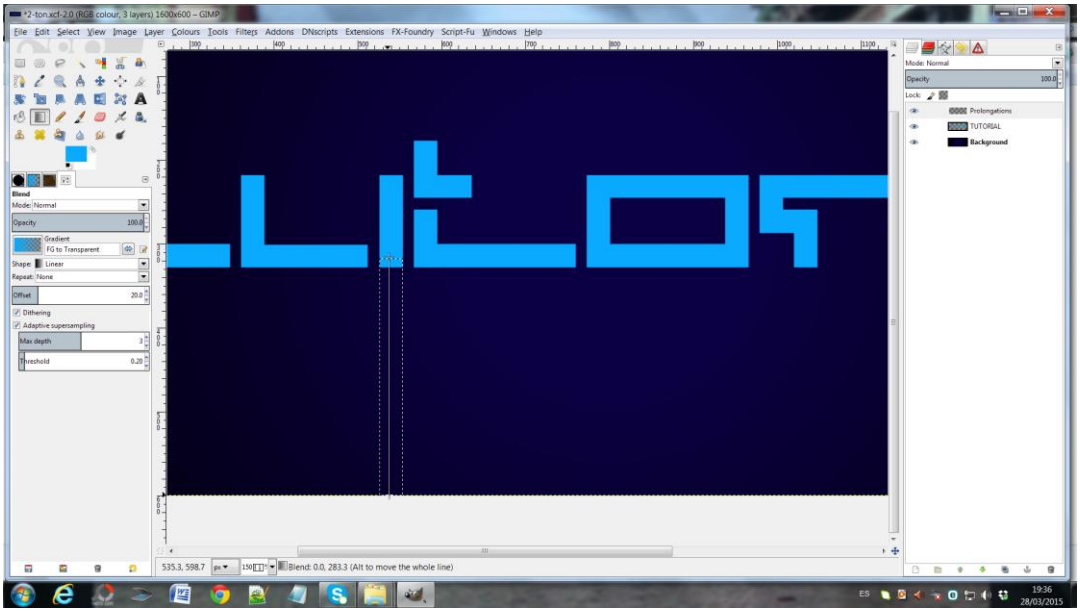

5 Create a new layer on and name it “prolongations”. Make a rectangular selection on one of the extremes of one letter. Make sure you take part of the letter and prolong the selection until the border of the canvas.

6 Put the foreground colour, the same you chose for your text. In gradients, choose from foreground to transparent.

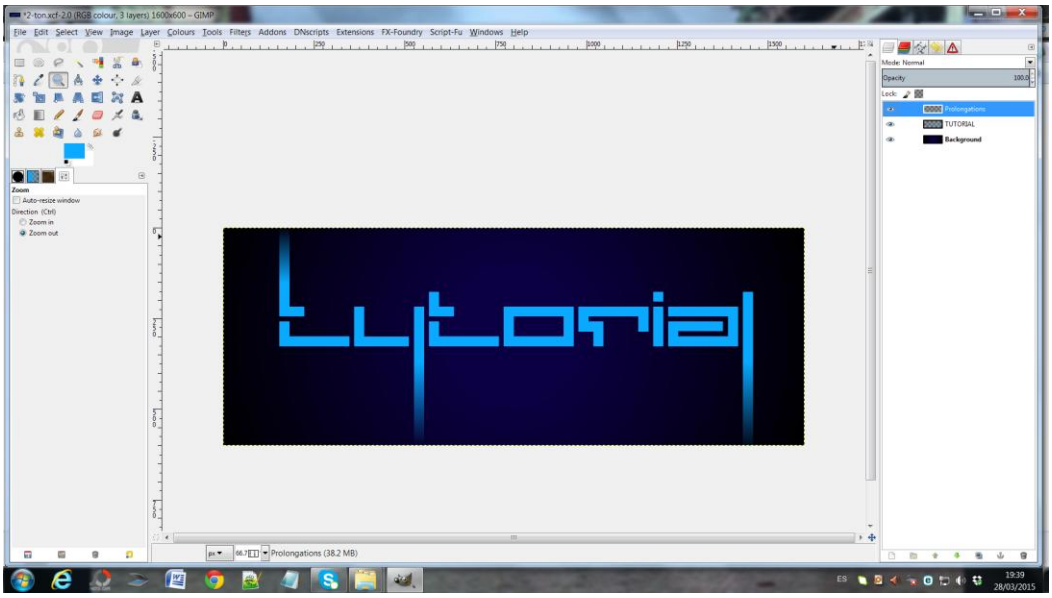

7 Apply the gradient inside your first selection, since the letter to border of the canvas.

8 Do the same action to each new prolongation that you do.

9 Merge layers when you finish your prolongations.

I hope to have made myself understood, but if any doubt, let me know. Thanks

Issabella
