Gimp Default Settings

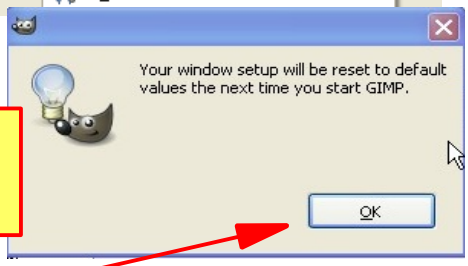

Sometimes when we close Gimp after a session we also close one or more of Gimps Dialogs or Layer channels.
You can reinstall them from [Windows] on the menu bar, but does require some know how.
An easier way is documented below.

1 To simply fix the problem, left click **[Edit]** and select... **[Preferences]**

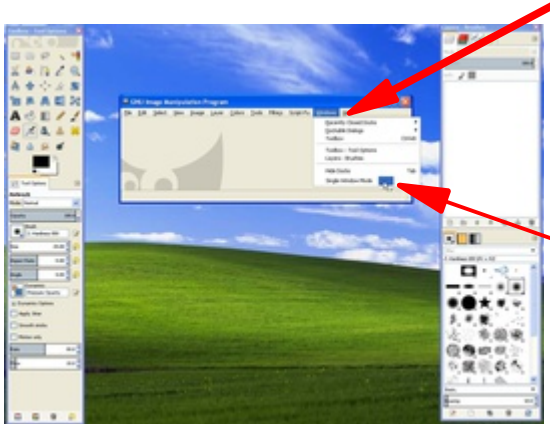

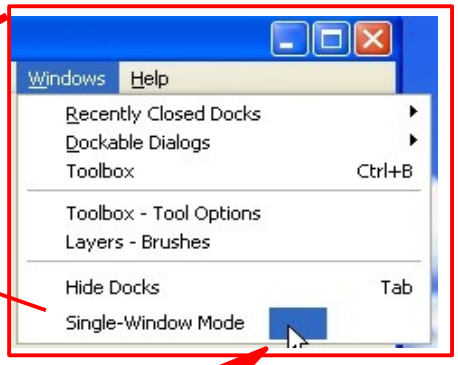

2 In the **[Preferences]** menu click on **[Windows Management]** in the window that shows, click..... **[Reset Saved Windows Positions to Default Values]** Then click **OK.**

3 Little notice informs about the settings, click **[OK]**

4 When you **[Restart]** Gimp it defaults with all your dialogs and tools.

You will need to rest to **Single Window Mode.**
Click **[Windows]** on the menu bar,

Then click on..... **[Single-Window Mode]**
