Clos
Hel

This tutorial was written for and using
JASC's Paint Shop Pro 7.04 10th Anniversary Edition,
Filter Factory A Triangular Mosaic filter,
and Simple Filters Pizza Slice Mirror.

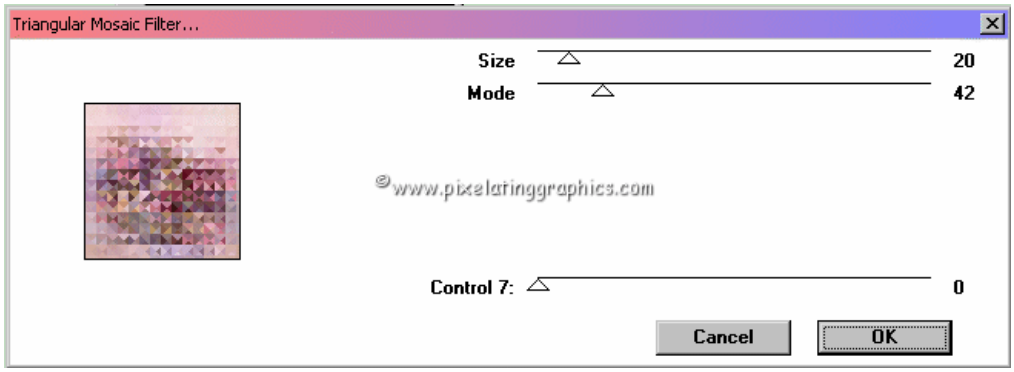

1. Open any image you wish to work with. Brightly colored images seem to work best for this. Hold down the SHIFT KEY on your keyboard, then hit the letter "D" to make a copy of your image. Close the original image. Then click on the copy of the image to make it active, and go to Colors, Increase Color Depth, 16 Million Colors (24 Bit). If this option is greyed out, do not worry - that just means the image you chose is ready to work with.

2. Go to Image, Resize. When the Resize window opens, look at the very bottom - you want to **UNCHECK** where it says "Maintain Aspect Ratio of:". The "Resize All Layers" should still be CHECKED. At Resize Type you want to choose Smart Size. Then go to the top of this window where it says Pixel Size - click on the radio button next to Pixel Size to make that the active choice. Next you want to enter 200 for the Width and 200 for the Height. Then click the OK button. See sample below:

3. Go to Effects, Plugin Filters, Filter Factory A, Triangular Mosaic Filter. Accept the default settings and click the OK button.

4. Go to Effects, Plugin Filters, Simple, Pizza Slice Mirror. And that's all there is to it! The quilt blocks will tile seamlessly for you - you can resize your quilt blocks by 50%, and also go to Effects, Enhance Photo, Manual Color Correction to make different colored quilt blocks as well. Just remember to HAVE FUN! ;-)
