Interweave different elements

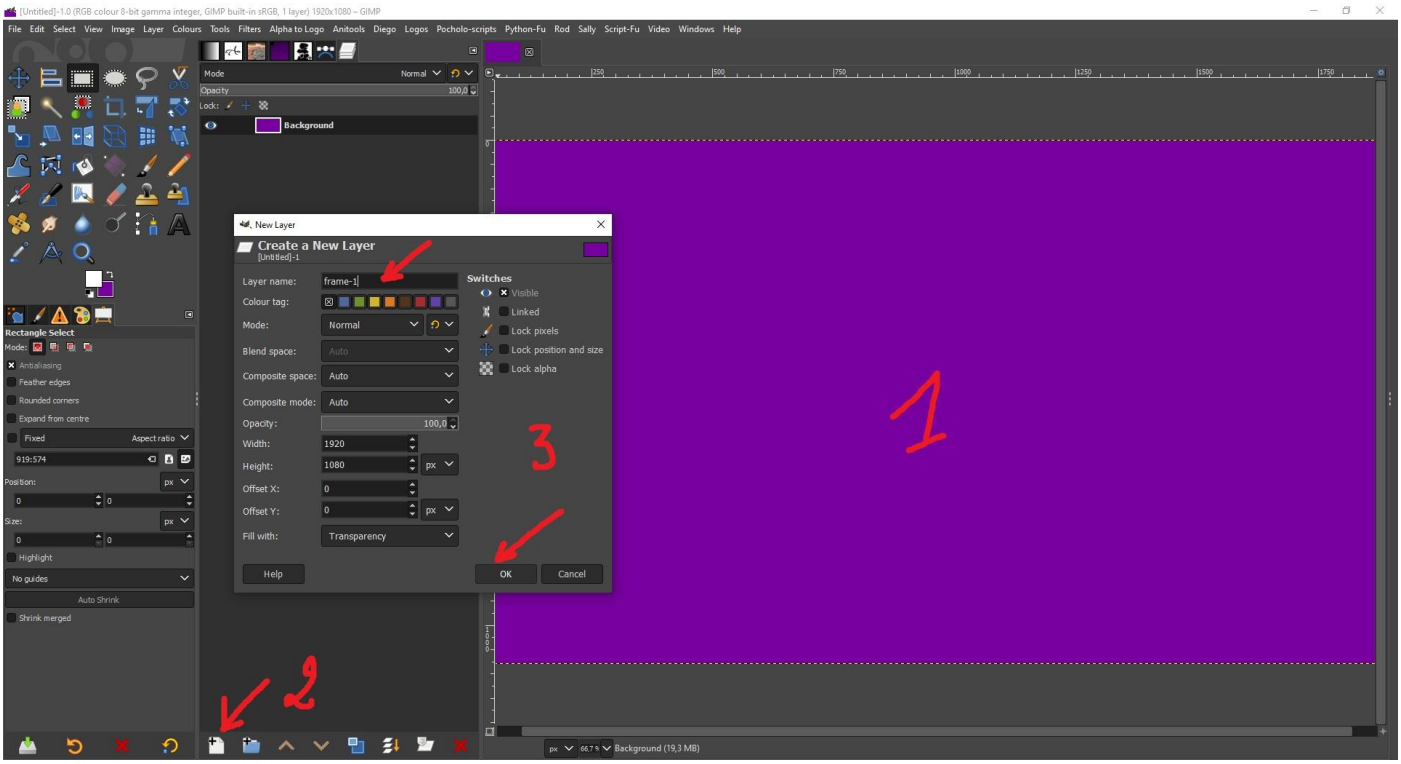

here the result

1-open a background

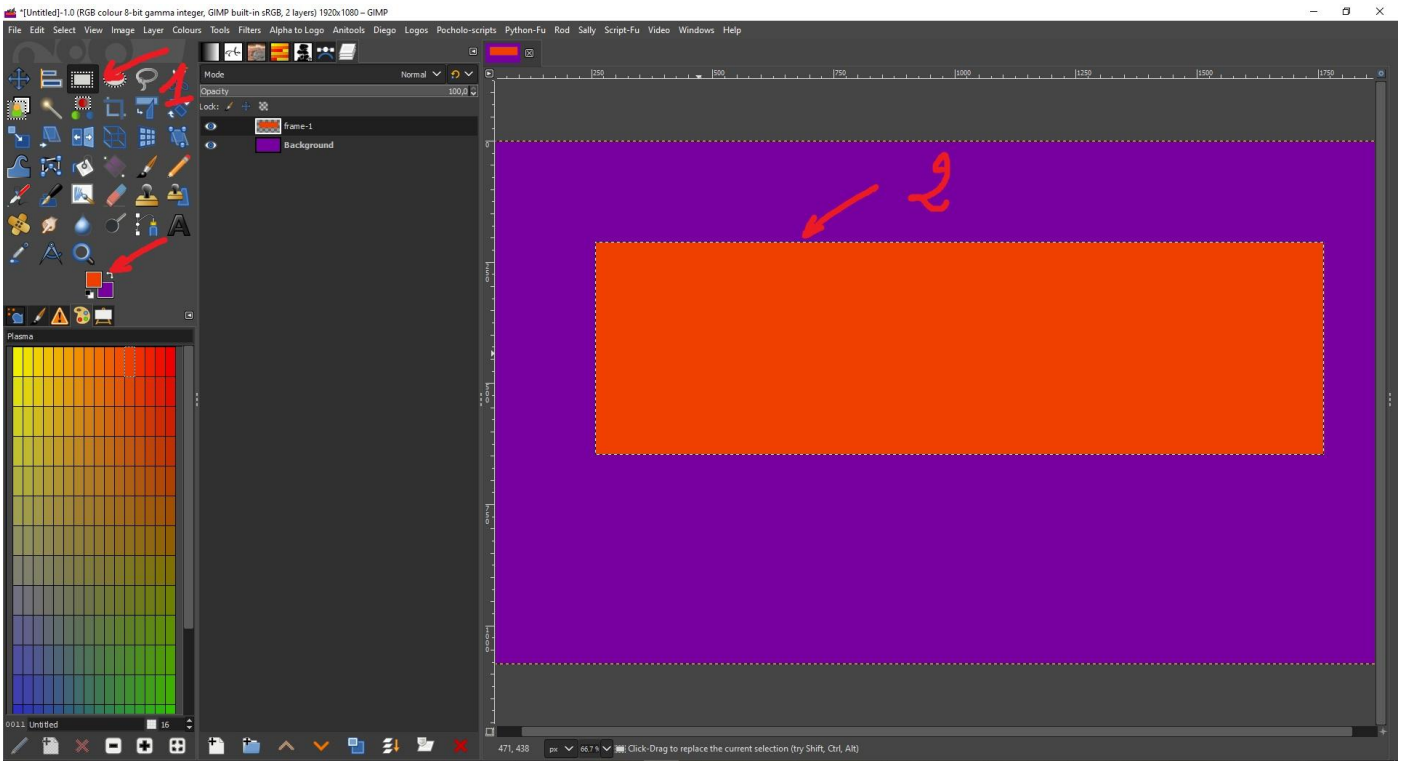

2-now create a new layer,

3-name it frame 1

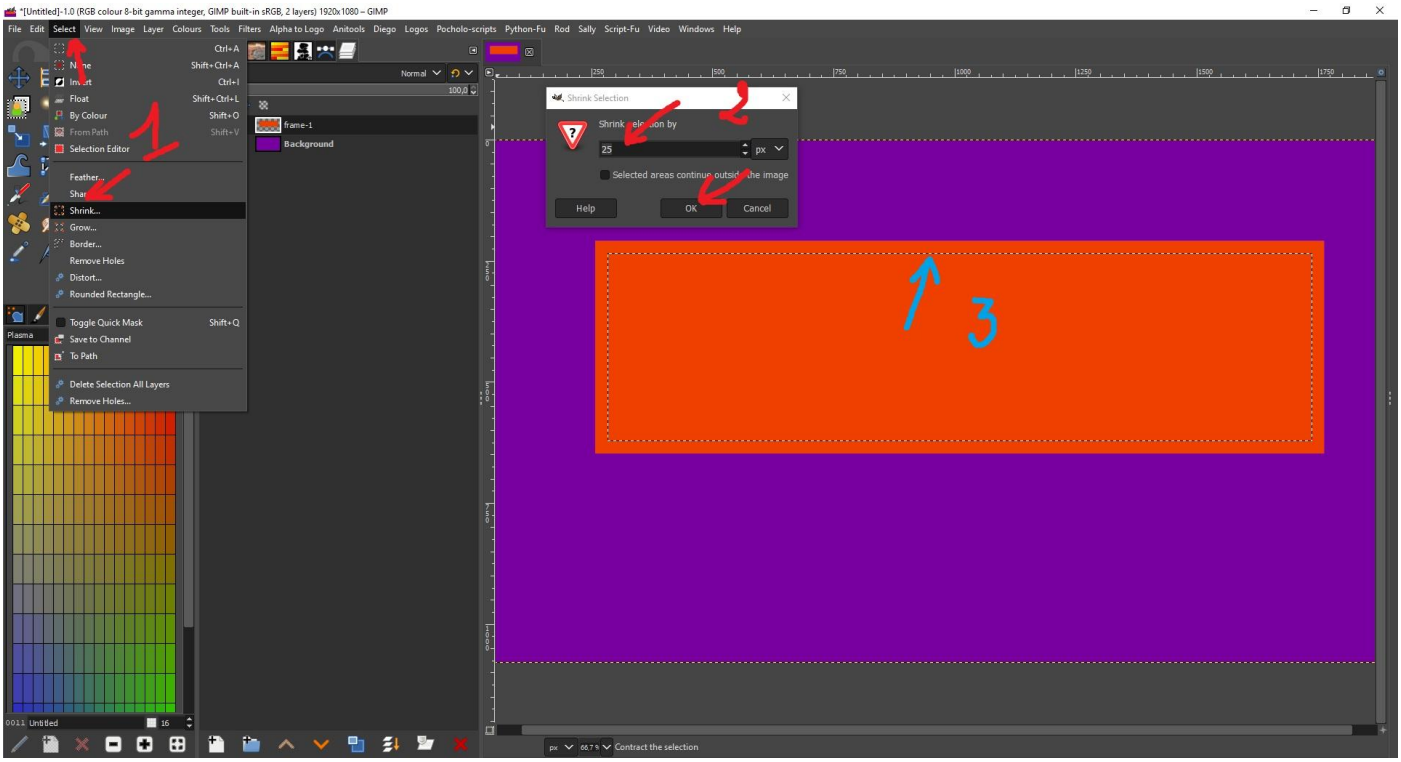

1-select the rectangle select tool, and make a selection

2-select a bright color and fill the selection with that color

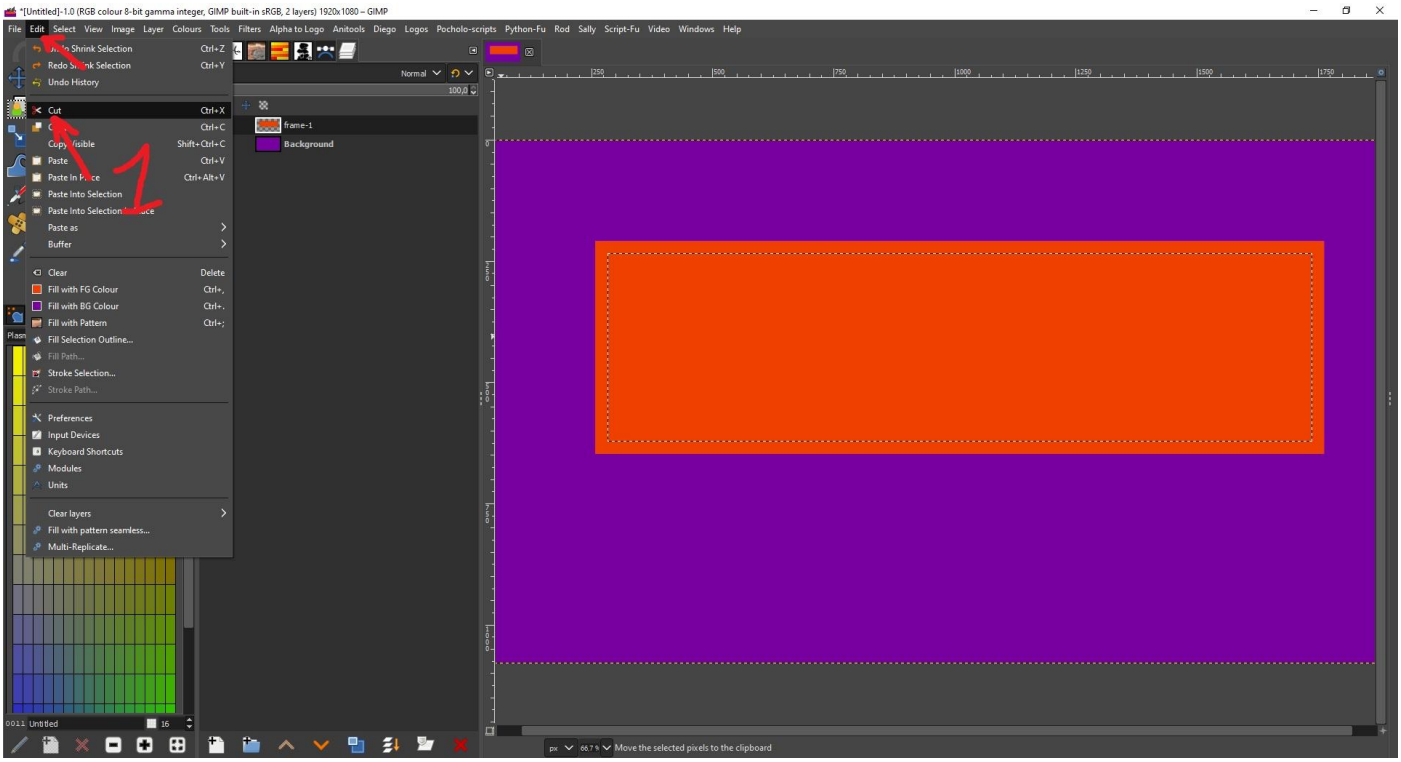

1-now, go to select and shrink.

2-shrink the selection as in the example

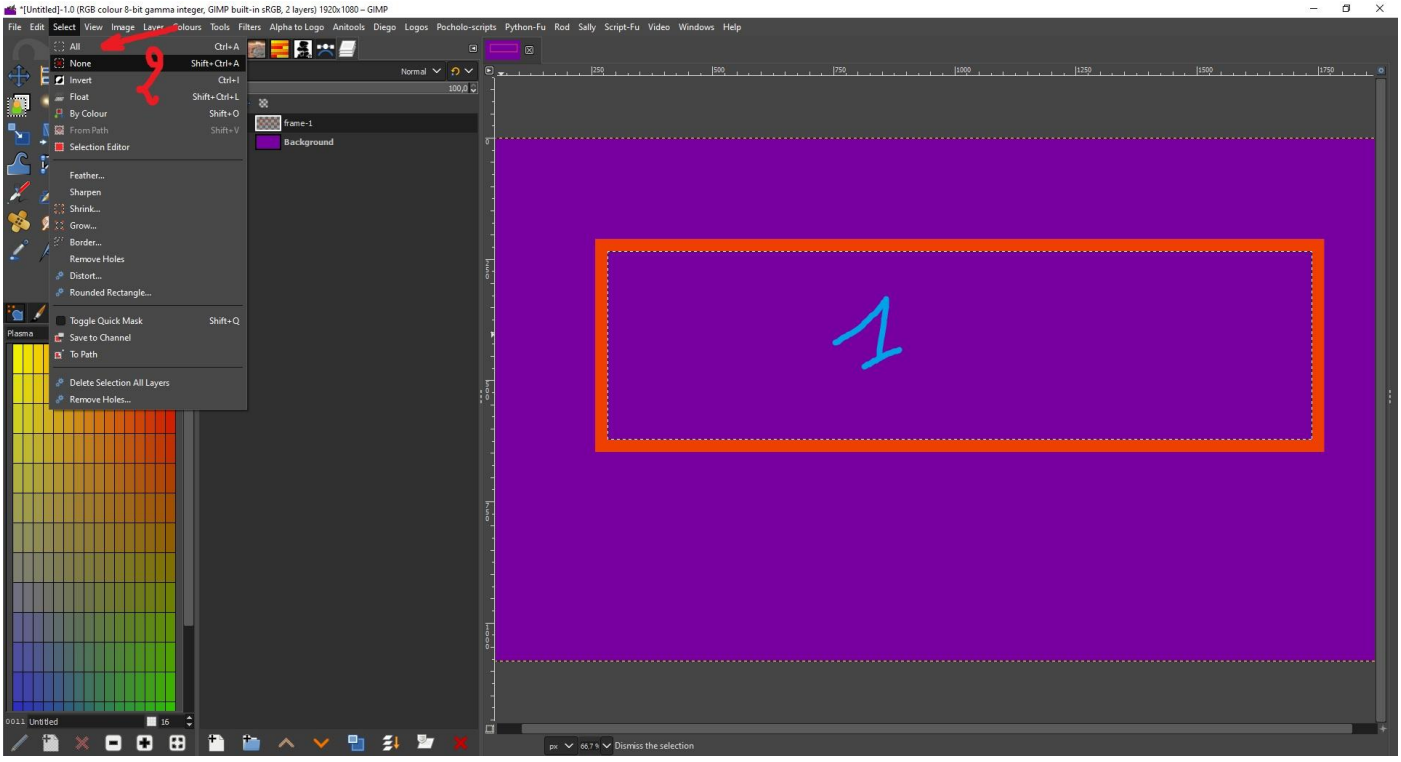

1-now go to edit and cut

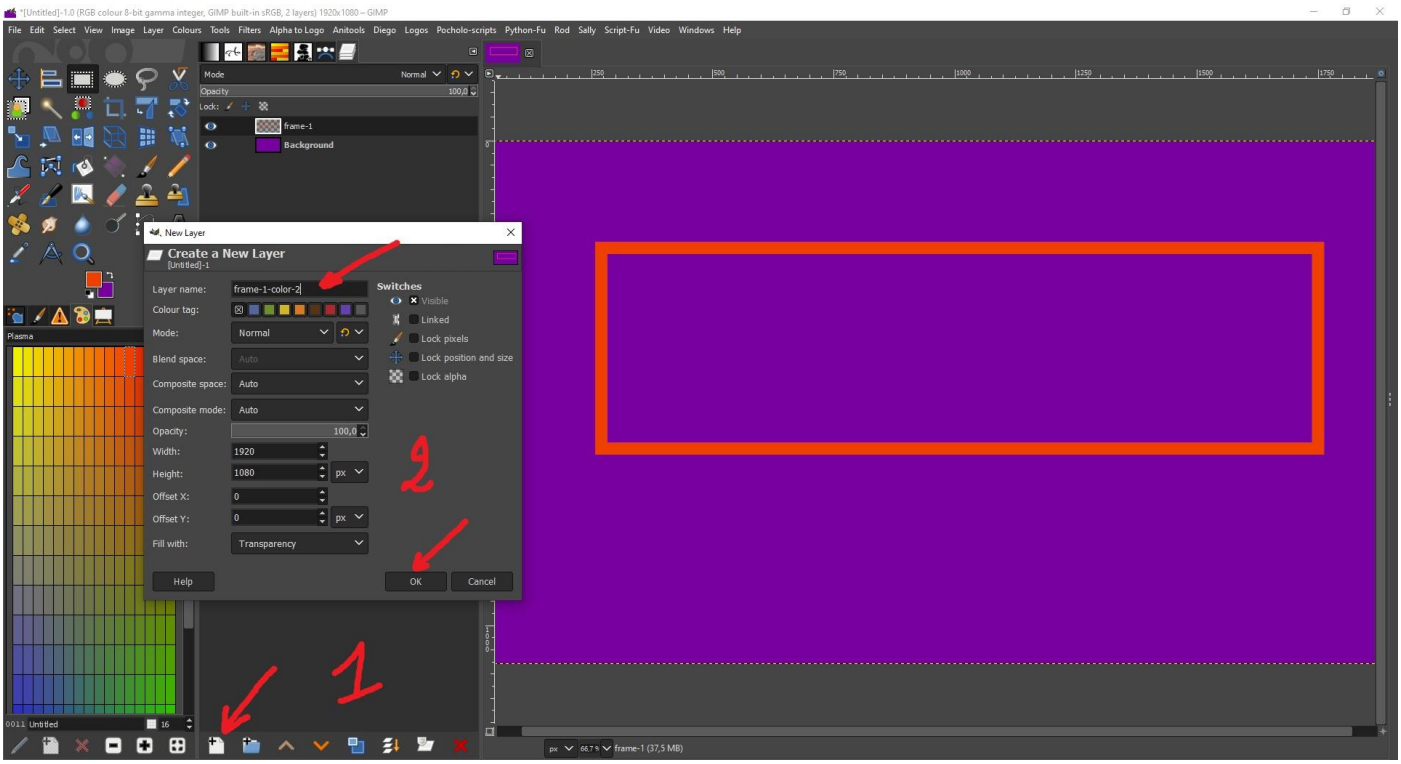

1-the selection has now been cut out

2-go to select none

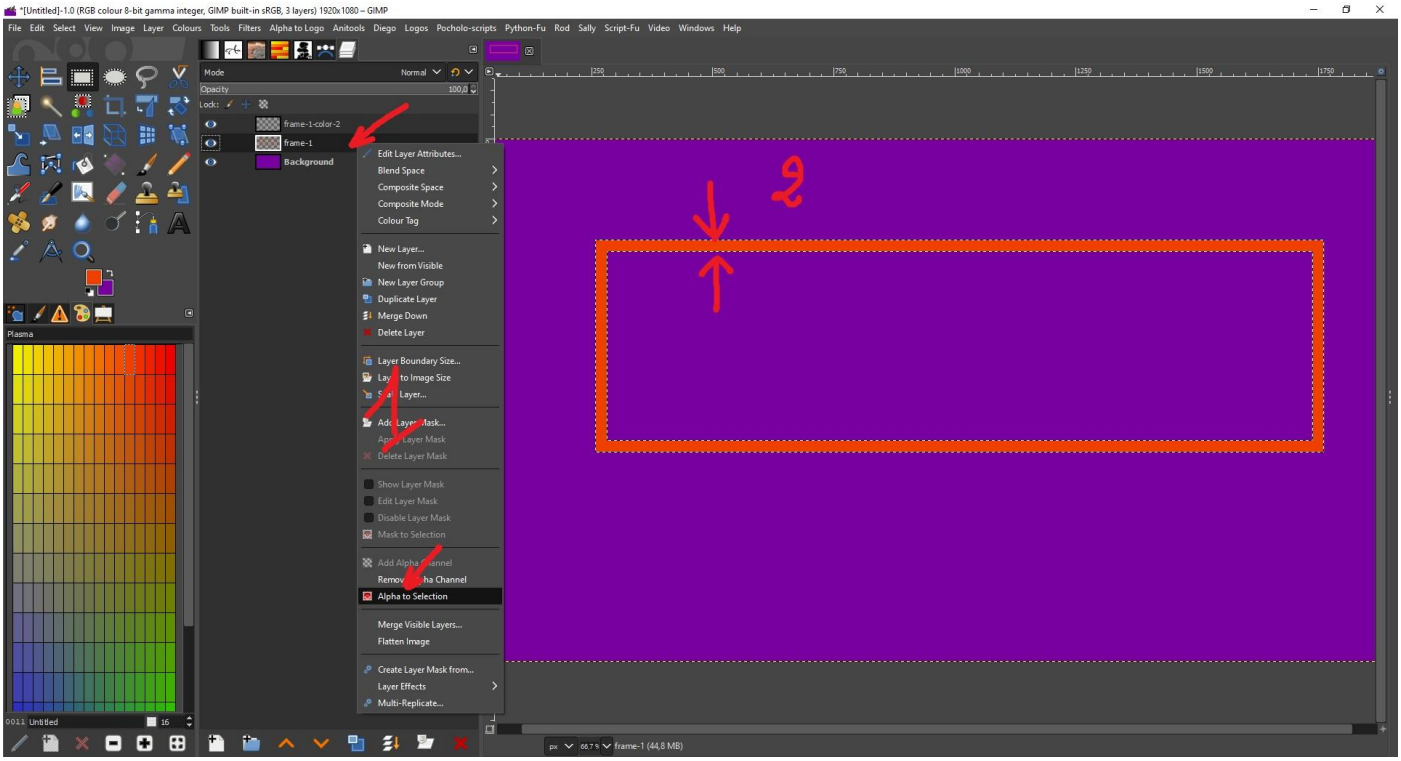

1-now click on the new layer icon

2-create a new layer name it frame1-color 2

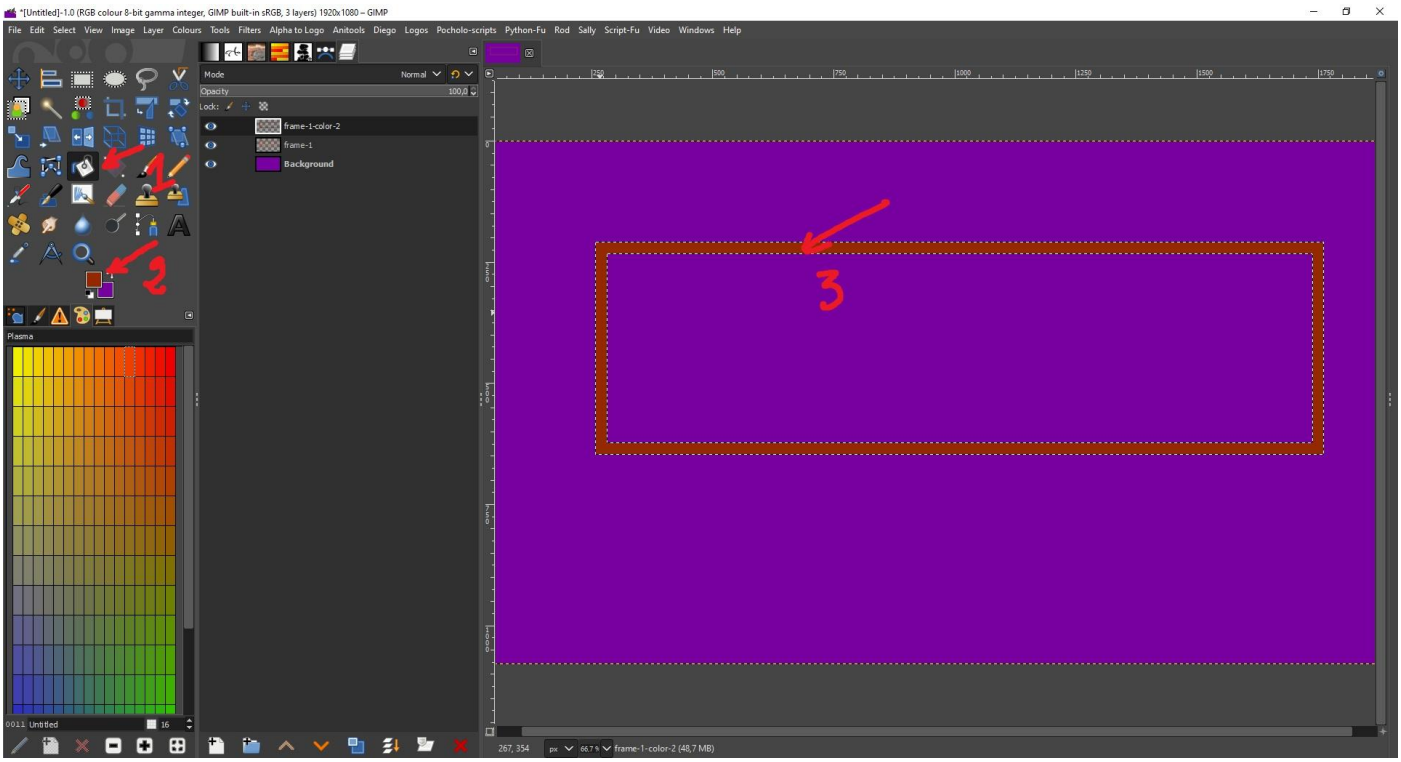

1-now right click on the layer frame 1 and do alpha to selection

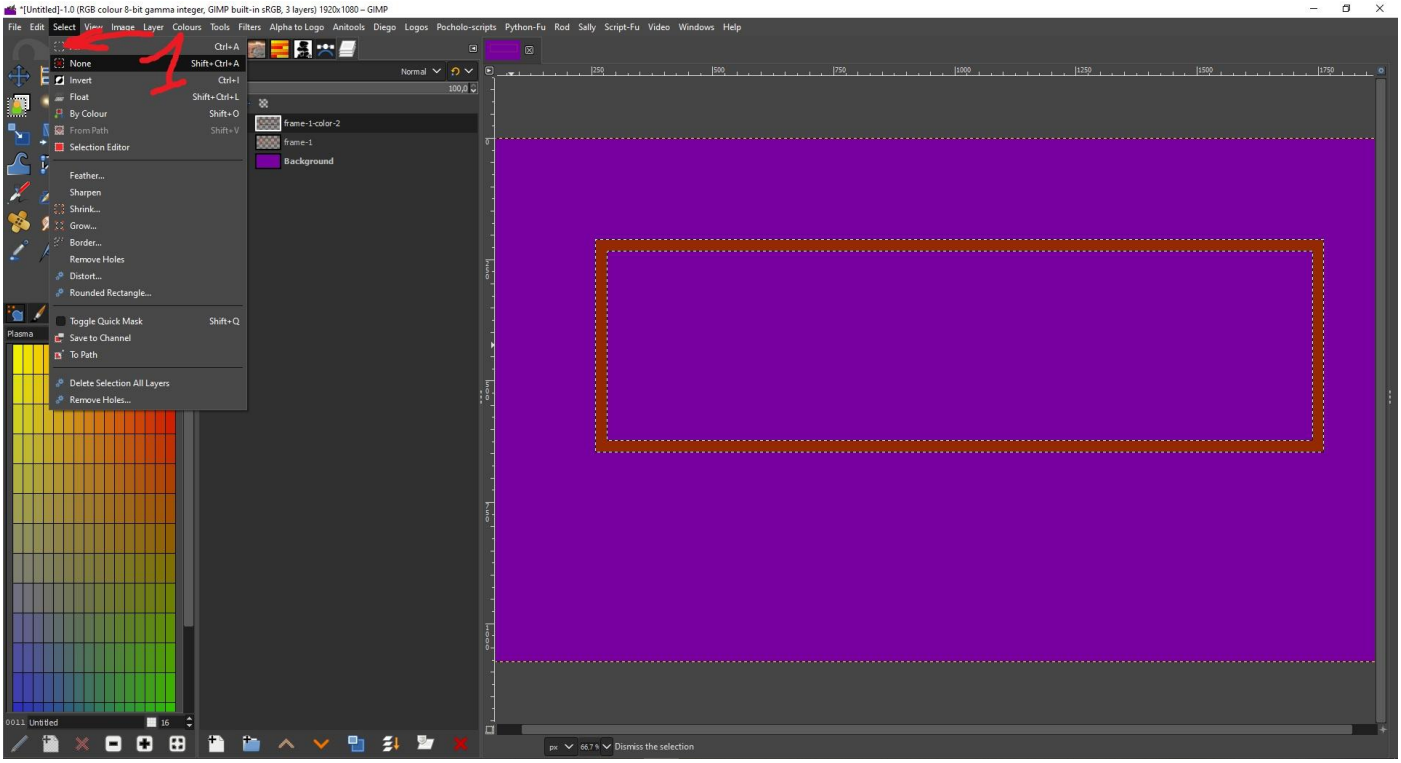

1-now select the layer frame 1 color 2

2-select a different color

3-fill the selection with that color

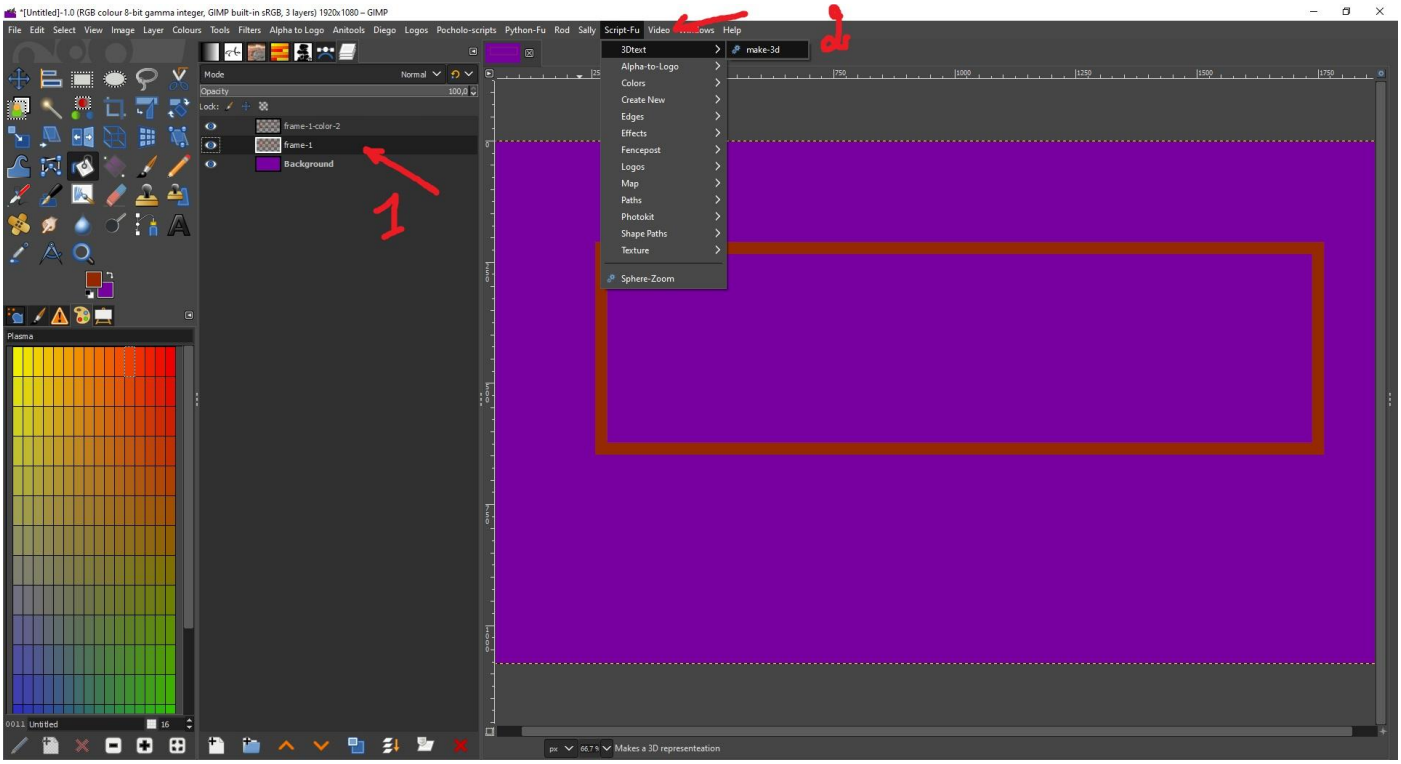

1-go to select none

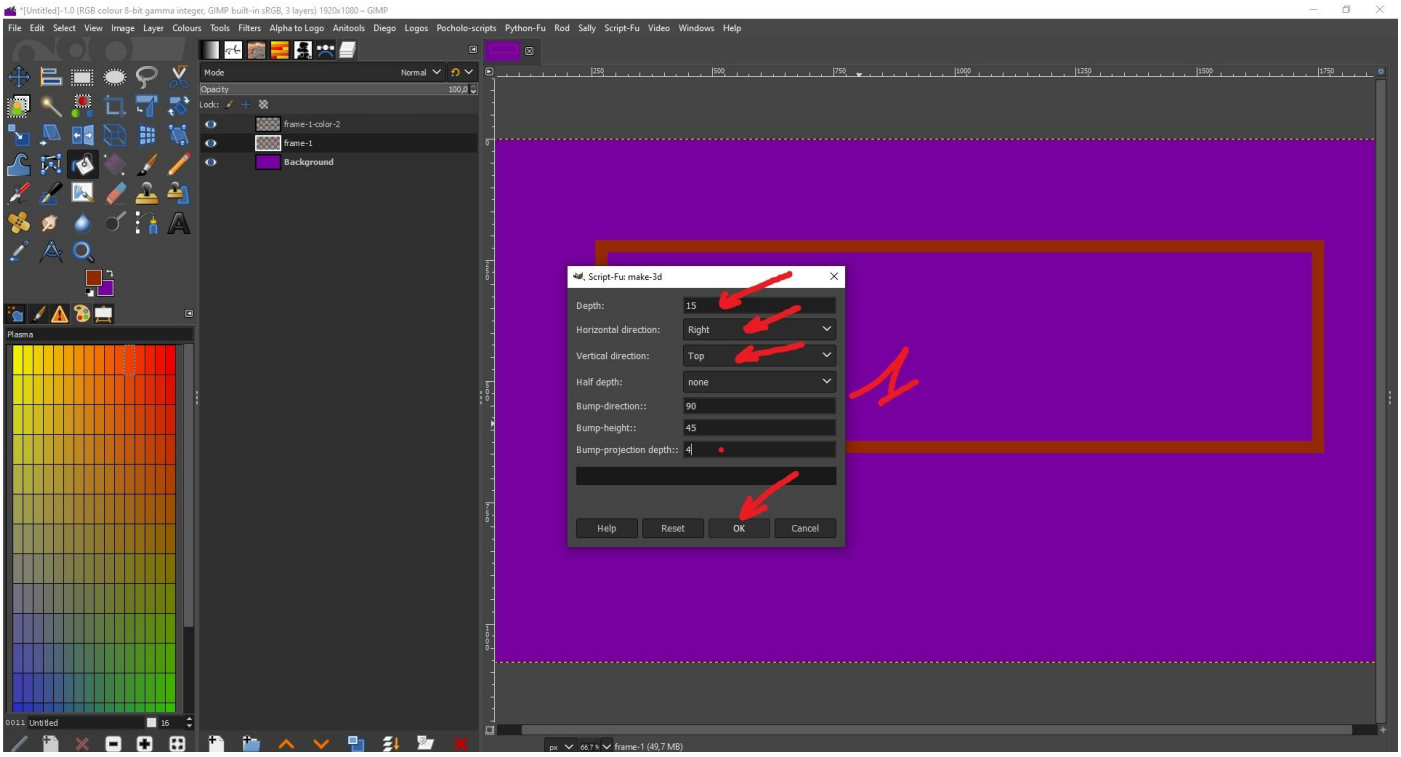

1-select the layer frame 1

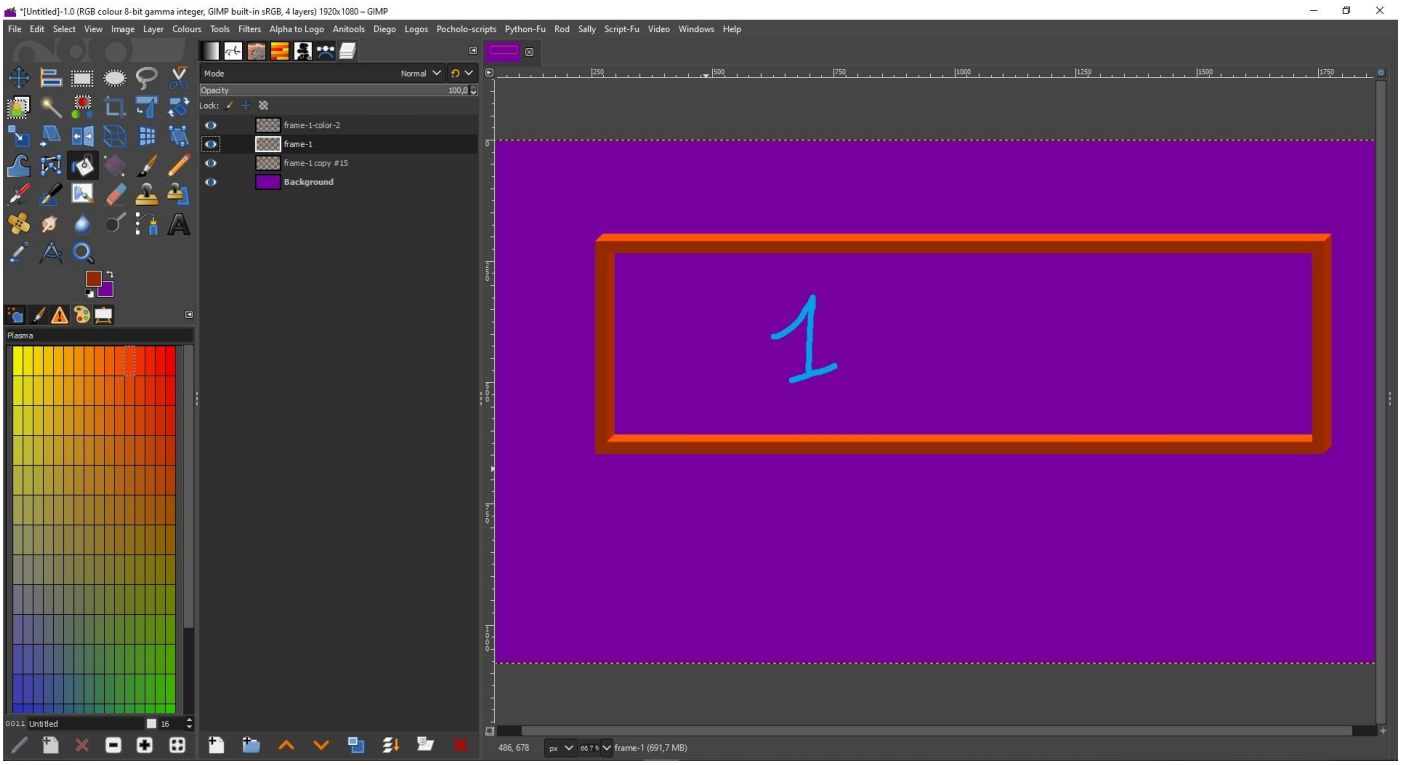

2-click on scriptfu - 3dtext - make 3d

1-a window will open, fill in as the example and klick ok

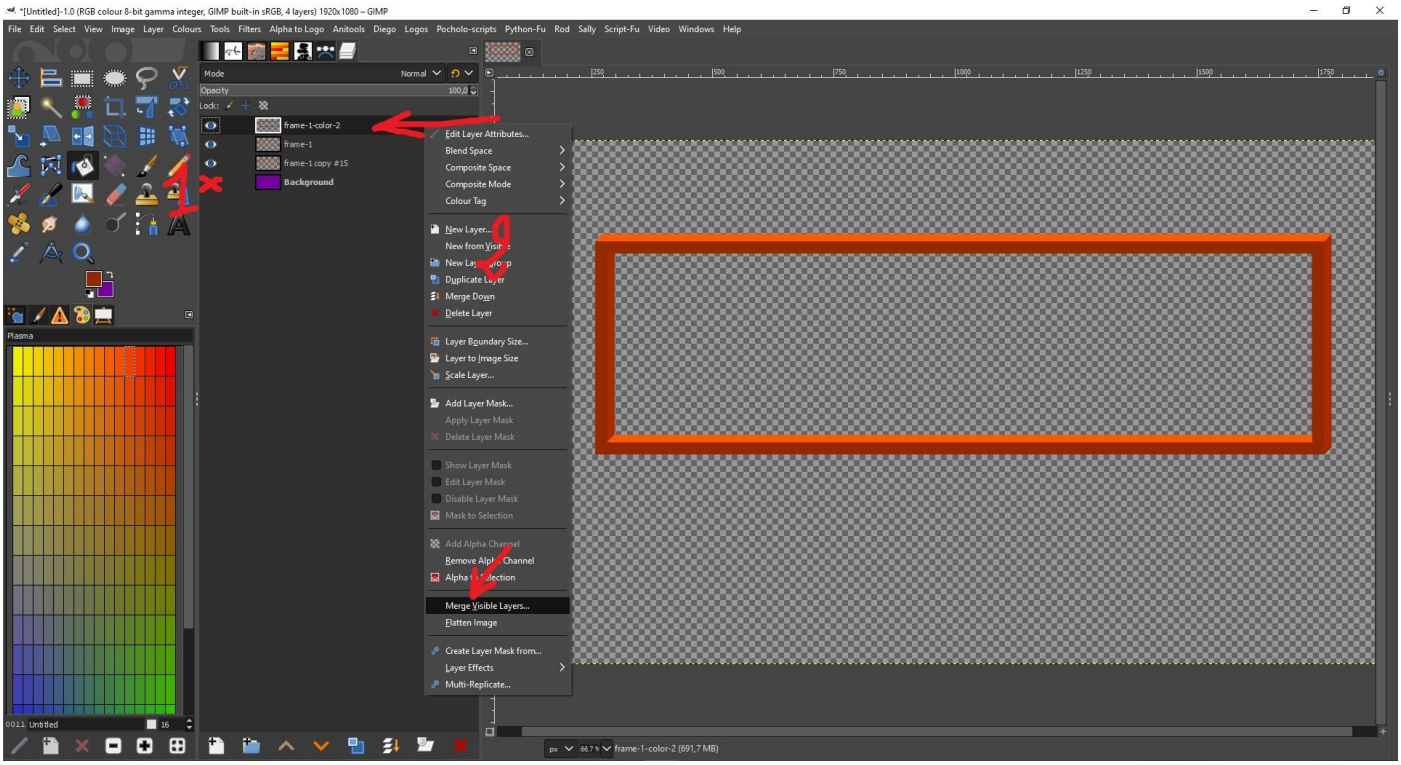

1-now you get a 3d effect

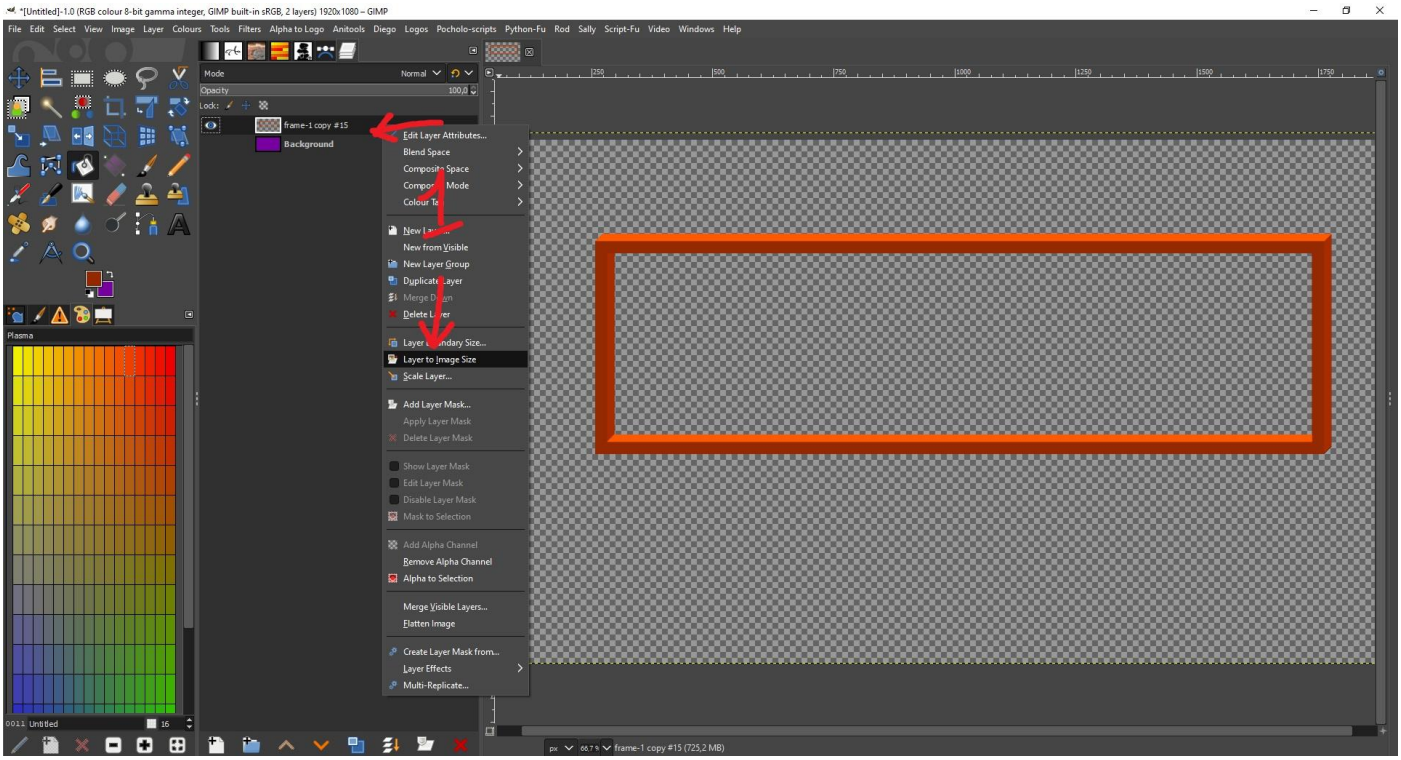

1-close the eye of the background layer

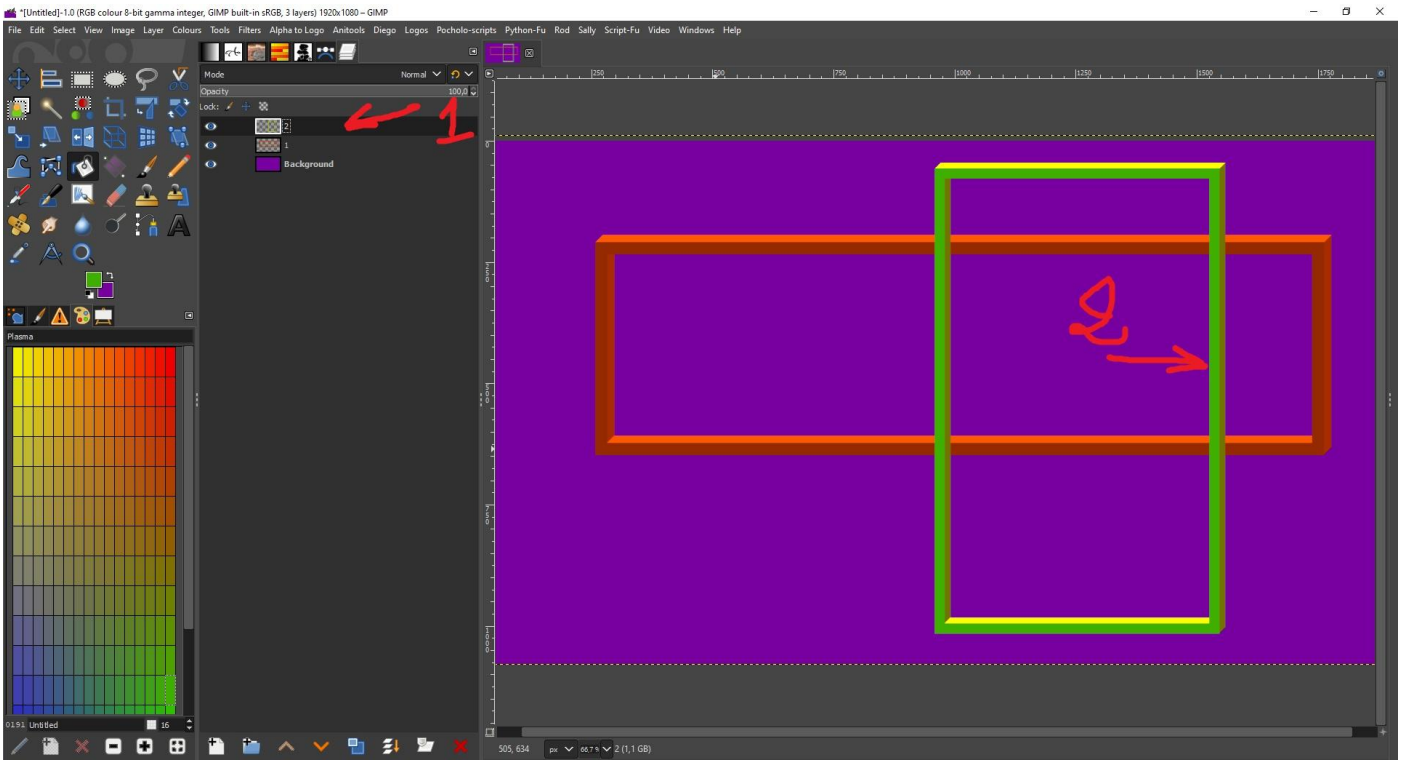

2-Now right click on the top layer and click merge visible layers in the drop list

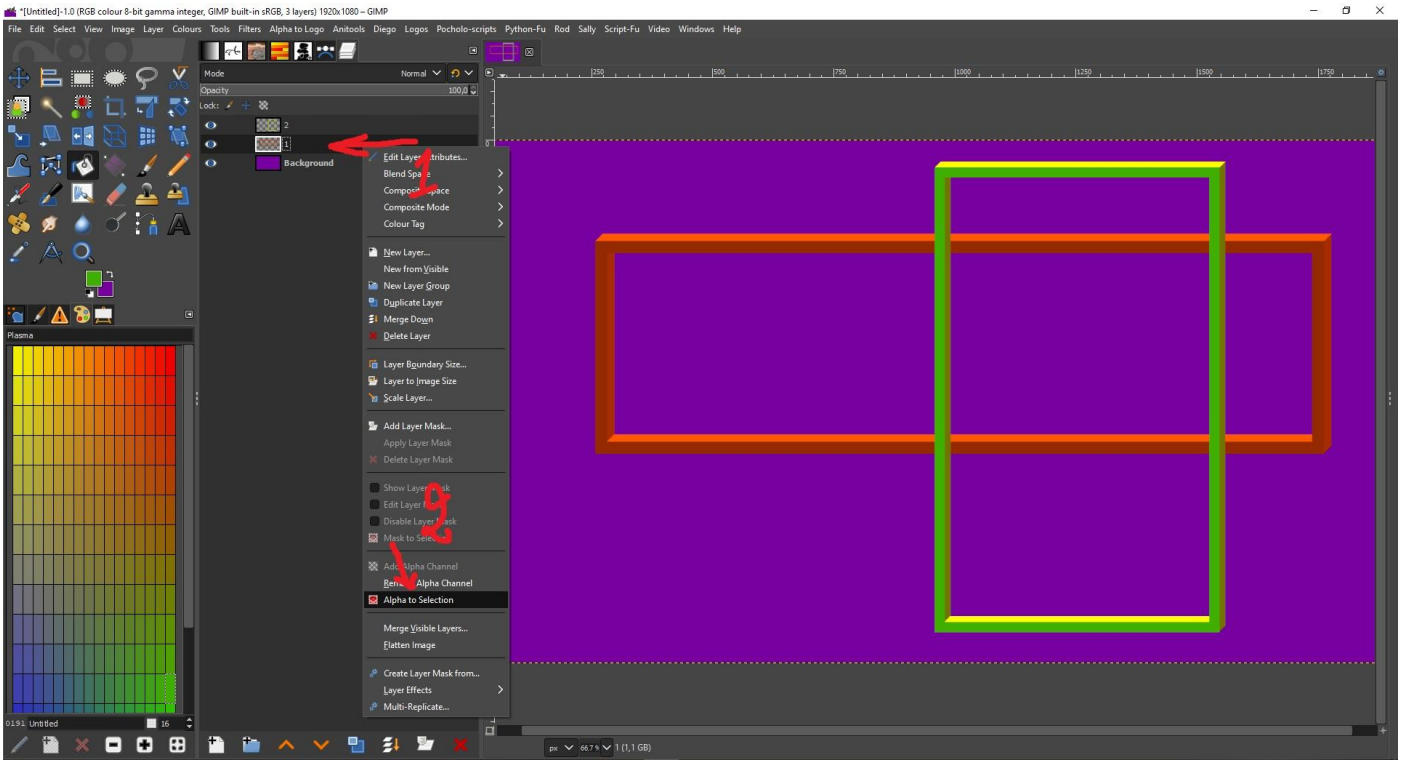

1-right click on the top layer and click layer to image size in the drop list

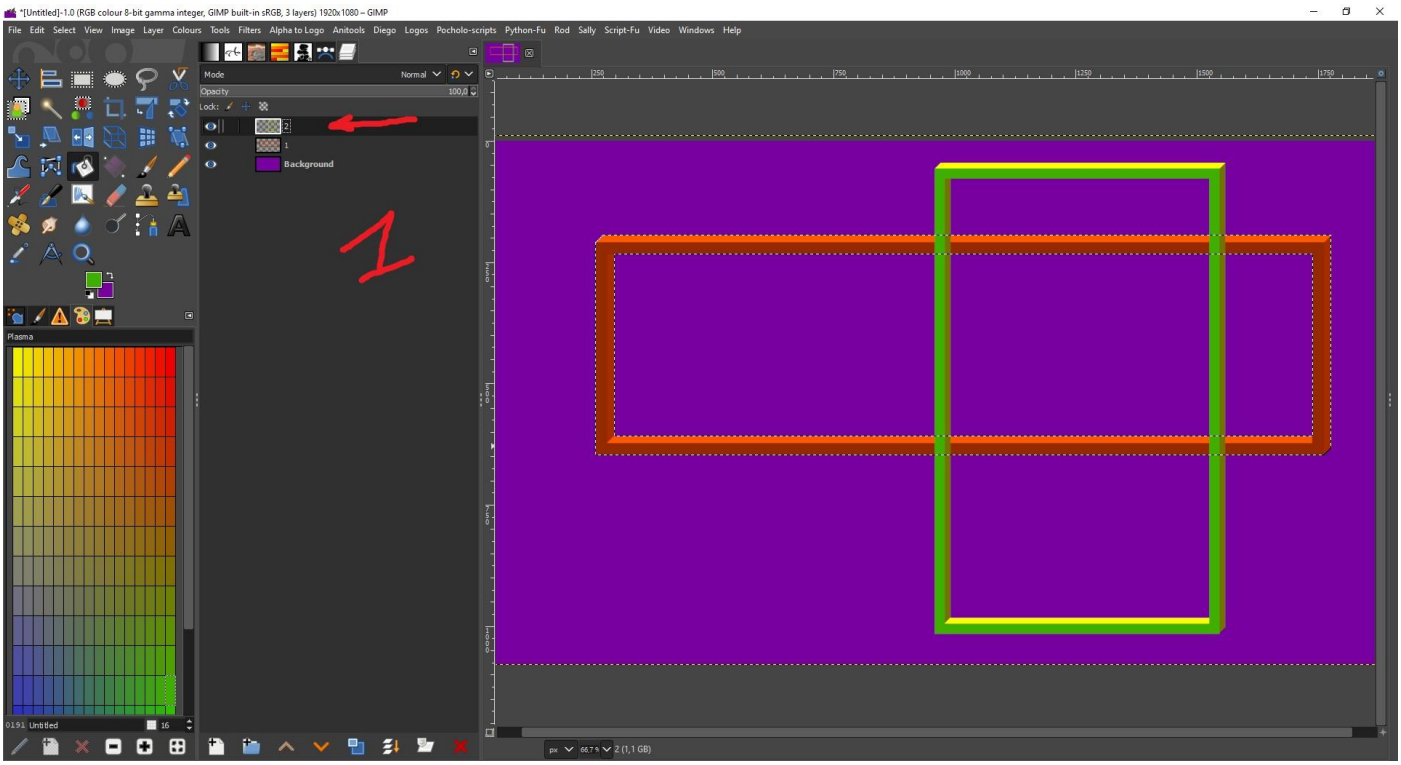

1-now do the same again and make a second 3d frame, as in the example

1-now right click on the layer frame 1, and in the drop list alpha to selection

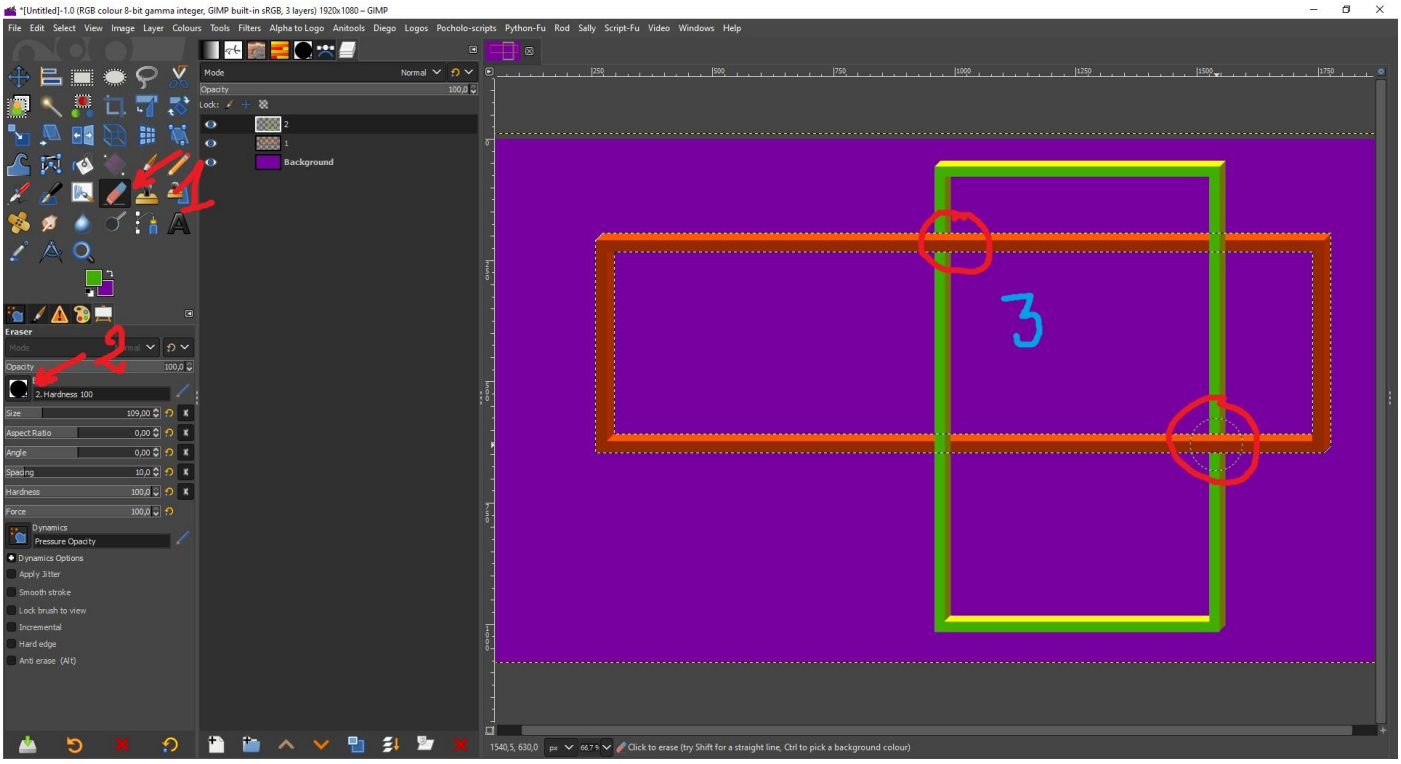

1-now select the top layer frame2

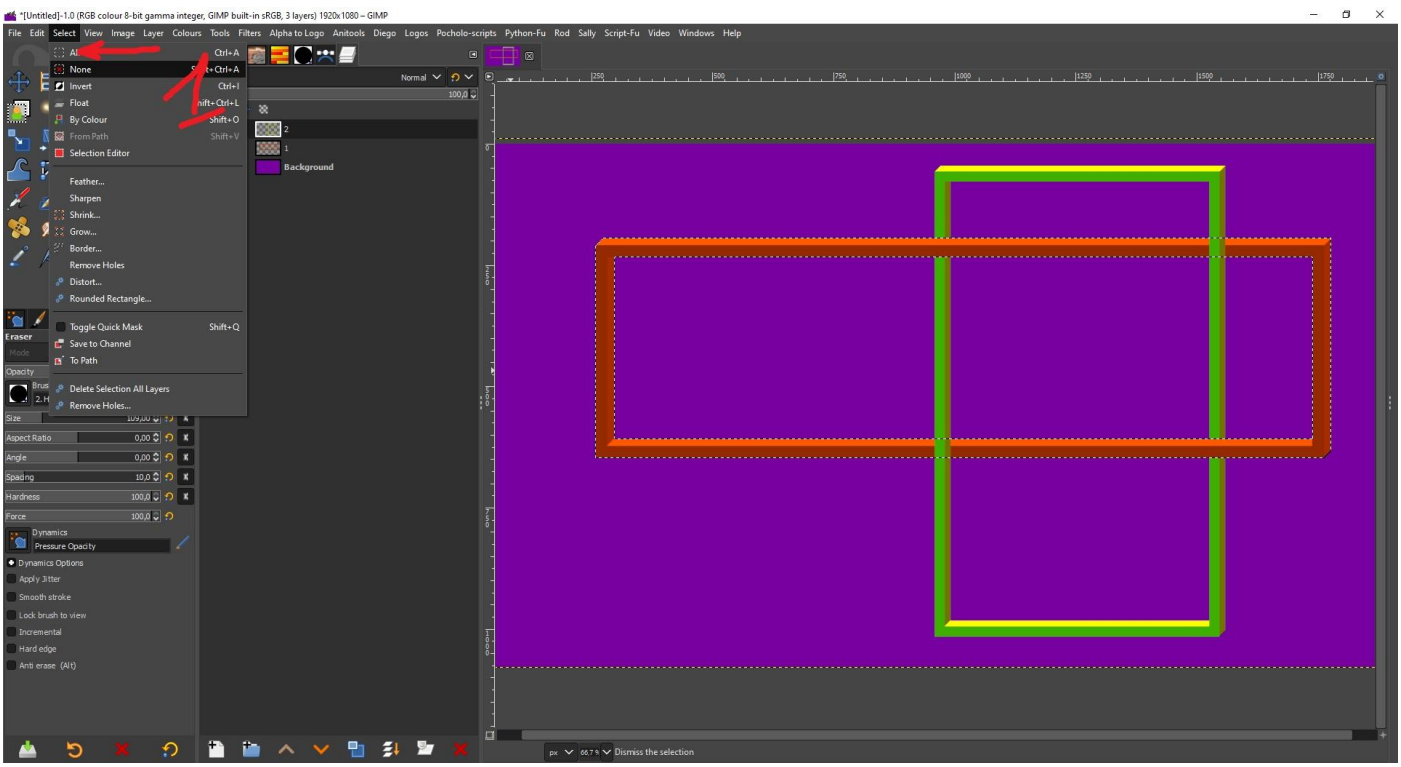

1-select the eraser tool in your tools

2-choose a hard brush 100

3-now swipe in the selection where you want the frame to come through (see example)

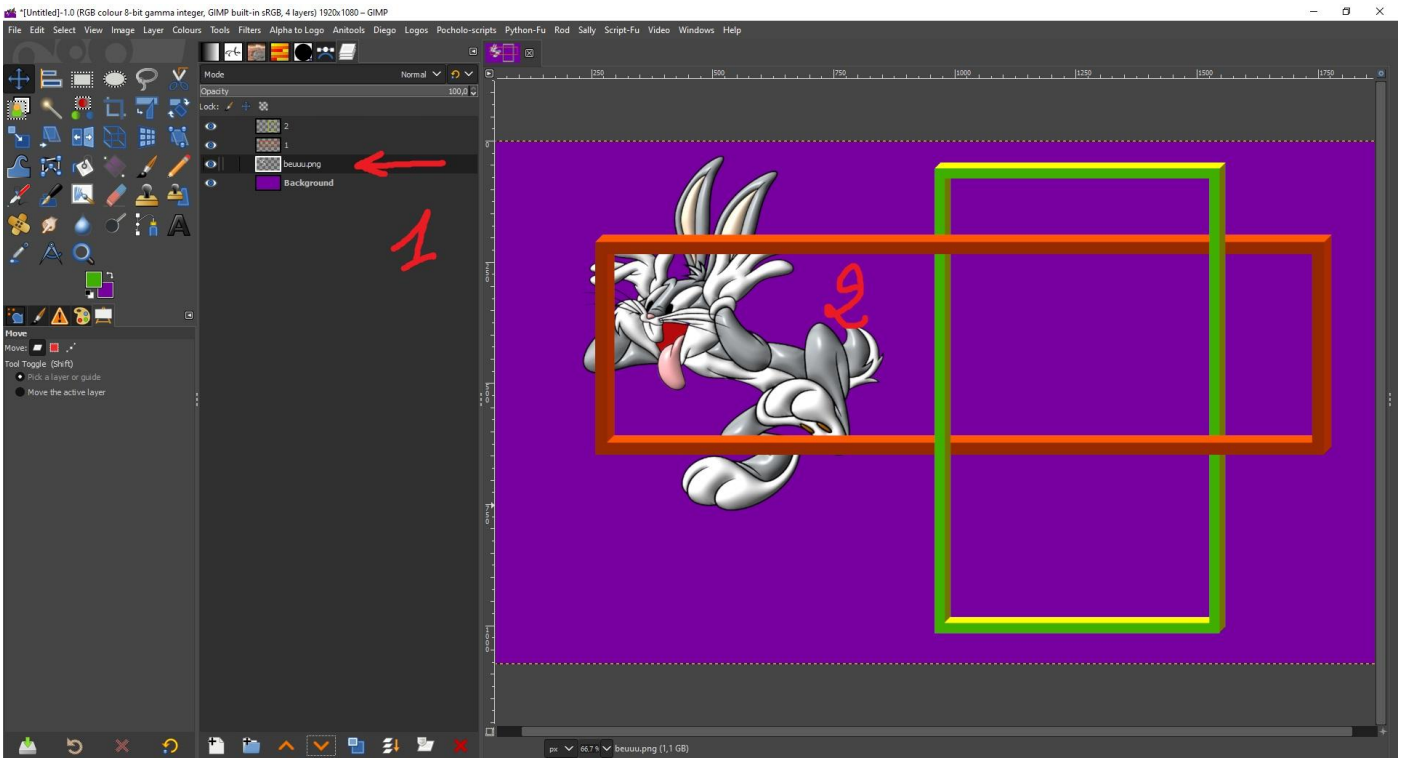

1-select - none

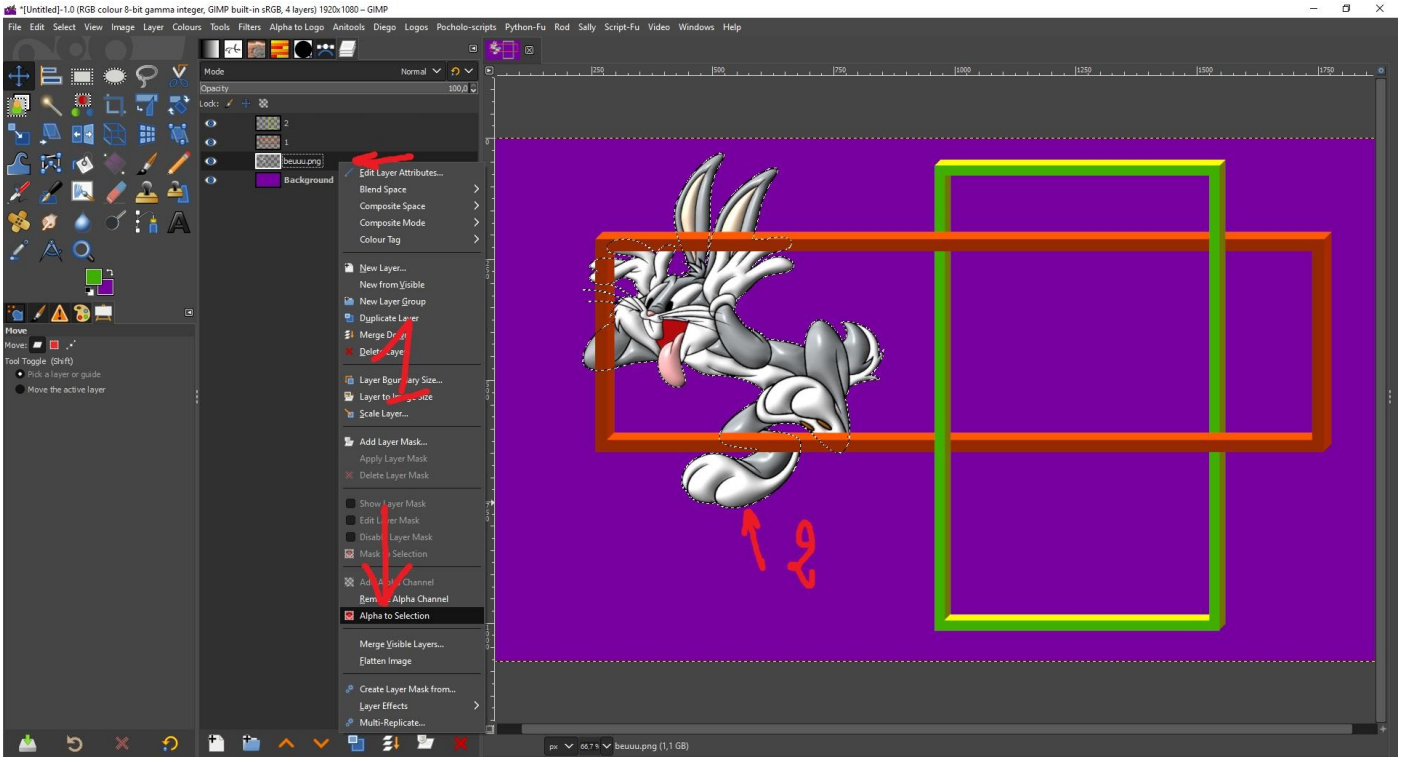

1-I now add a transparent figure and place it just above the background layer

2-and behind the frames

1-right click on the layer with figure and do alpha to selection

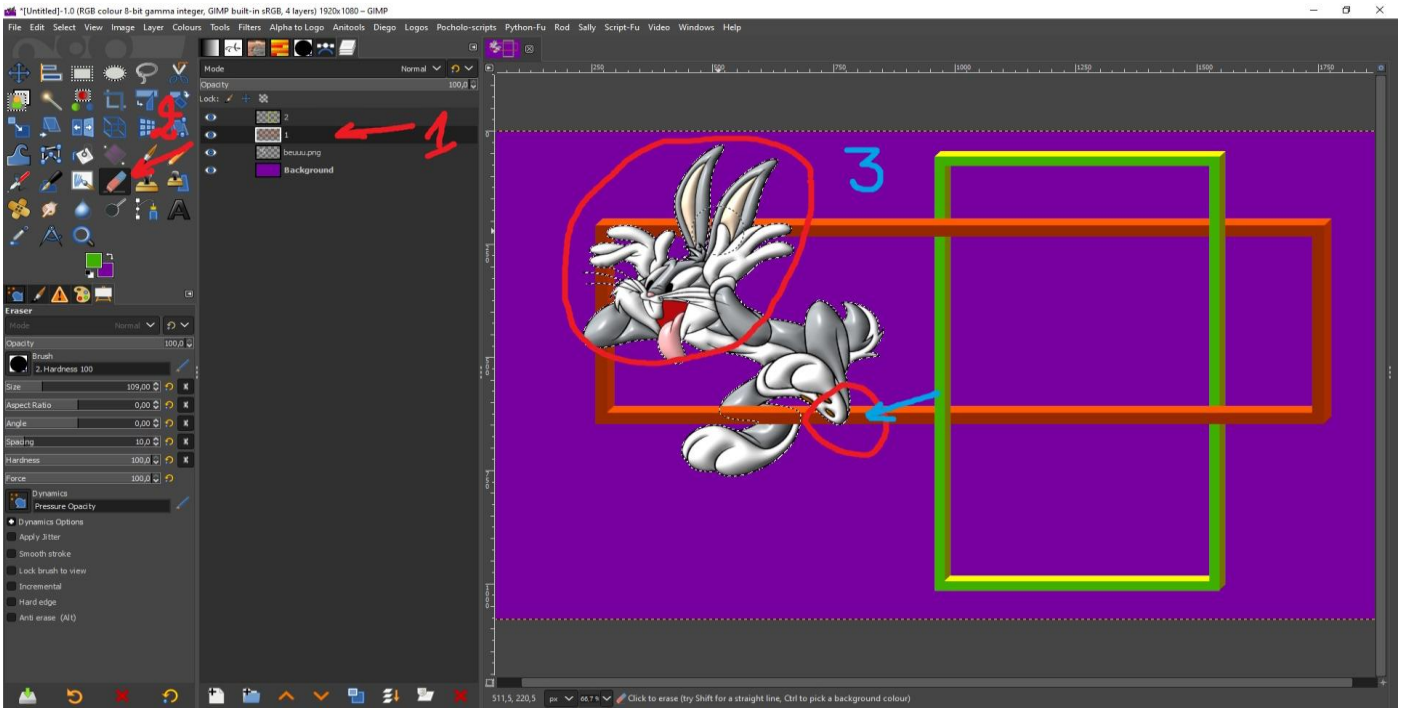

2-there is now a selection around the figure

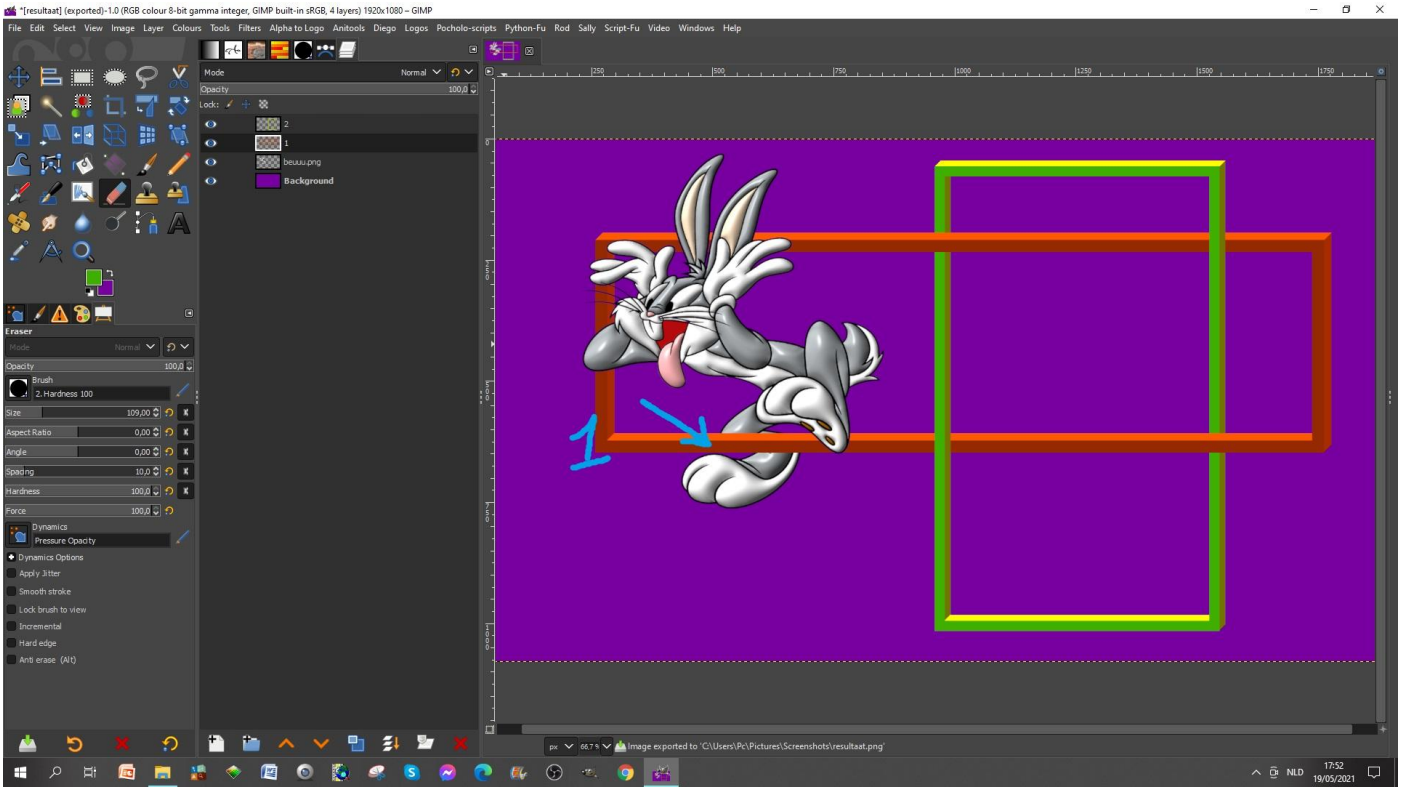

1-select your eraser tool

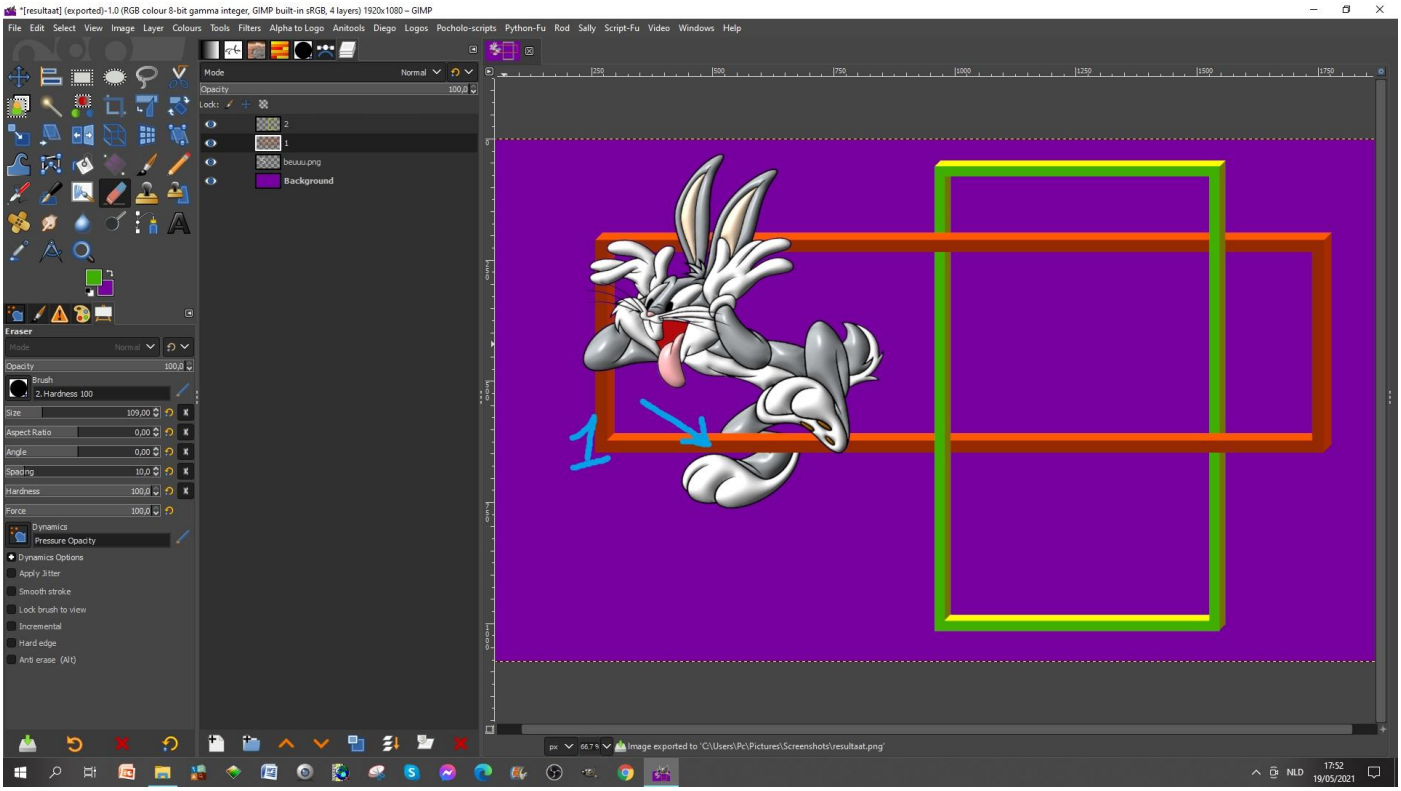

2-select the layer frame 1 (where the figure should come through)

3-now swipe in the selection where you want the figure to come through the frame (look closely at the example)

1-you will now see one leg of the rabbit behind the frame and one leg over the frame, also the top part2-now do select - none

and we are done

happy gimping,gimper
